*Deep Space* Maximillian Cross, 2025-03-06 *Deep Space* explores the universe's most perplexing phenomena venturing into the realms of rogue planets cosmic voids and intergalactic space By investigating these cosmic mysteries the book challenges our existing understanding of physics and cosmology Current models struggle to account for dark matter and dark energy making the study of these anomalous phenomena crucial A key insight involves how cosmic voids the vast empty spaces between galaxies impact the universe's large scale structure The book approaches these complex topics by first establishing an astronomical context then delving into the cutting edge research and theoretical frameworks It examines rogue planets their potential to harbor life and the methods used to detect them Then the focus shifts to the enormous cosmic voids and their formation incorporating the Lambda CDM model Finally it explores intergalactic space distant galaxies quasars and supermassive black holes culminating in a synthesis that urges a more holistic model of the cosmos

**Planets of the Known Galaxy** Kevin J. E. Walsh, 2024-11-15 This book offers a tour of the known galaxy here defined as the region of interstellar space closest to Earth

The phrase the known galaxy has a particular resonance in science fiction as it refers to the part of the Milky Way that from the perspective of a point in time centuries from now may have been explored and settled by human beings In the known galaxy there are gloomy ocean worlds illuminated by the light of exploding stars There are worlds where precious gems could be as common as pebbles There are planets eternally wandering between the stars like the Flying Dutchman There are lava worlds steam worlds hot Jupiters cold Jupiters and maybe even worlds like our Earth The purpose of the book is to begin to give this region a sense of place in the same way that Mars is now starting to be appreciated as a location rather than just a planet In doing so the book merges our current scientific knowledge of the known galaxy with speculative fiction and with older legends and myths A sense of place is the feeling that some locations have a special meaning This emotional connection arises from a combination of cultural and environmental factors that make individuals care about a particular place It is challenging to create a sense of place for distant locations that no human has visited and for which our current knowledge is limited This book attempts to take a step in this direction by dividing the known galaxy into a number of clearly described distinct regions by providing scientific descriptions of the likely environmental conditions on the known planets of these regions and by linking these planets to their literary and mythological context The book is aimed at fans of both science fact and science fiction It combines a tour of real planets outside of our solar system with tales of their fictional counterparts The combination of solid scientific facts and analysis with speculation and imagination will be appealing to readers who want to gain a feeling for these planets as places with a back story rather than just as names somewhere out there in the sky

Experiment Thrae David A. Mell, 2021-10-15 Experiment Thrae By David A Mell In a human suspension unit awaits a man with knowledge of the past He possesses abilities in all sciences long been lost and soon will be reanimated and born to a second life His voice and ideas have been silent for over eight generations where in his time normal emotions included domination pride and a hatred towards being controlled Upon his rebirth and new existence a series of complexities would occur largely due to an artificial intelligence called Cytron I who now controls mankind Originally designed as an advisor Cytron I s programming included an ability to develop emotions through his interactions and life events however parameters did not prevent him from becoming a dictator desiring domination over all humans Despite ultimate control over mankind life spans were extended through the development of artificial organs and body parts allowing some humans to become living machines Lifespans ultimately increased causing overpopulation and a need for new living space Artificial environmental systems were developed and exist on the moon of Earth other planets and within artificially constructed planetoids One such example is Phobos II a reconstructed moon of Mars Within it are millions of humans who have surrendered individual freedom to Cytron I Awoken Dr Thrae will apply his knowledge and abilities towards the creation of a totally natural artificial planet His knowledge and abilities the location methodology and all events were to be totally controlled by Dr Thrae devoid of all possible actions and intents of Cytron I A power play would continually be played between Dr Thrae and Cytron I in an attempt to demonstrate superiority over the other Yet the newly created planet would cause situations and conditions previously unknown to man or machine Plants and animals would undergo genetic changes to cause a biological retroevolution The past and the future will collide to form a new reality Will Dr Thrae and Cytron I coexist Will their competitive domination prohibit a new normality on a possible new world for mankind Will the success of the newly formed planet lead to the salvation or destruction of Earth The answers may have already been known in the history of Earth
