Secrets of Snakes David A. Steen, 2019-09-23 Winner 2020 National Outdoor Book Award Nature and the Environment Snakes inspire extreme reactions Love or hate these limbless reptiles almost everyone is fascinated by them Although snakes are widespread and frequently encountered they may be more misunderstood than any other group of animals From giant rattlesnakes to mating dances there are dozens of myths and misconceptions about snakes In *Secrets of Snakes* The Science beyond the Myths wildlife biologist David Steen tackles the most frequently asked questions and clears up prevailing myths

In a conversational style with a bit of humor Steen presents the relevant biology and natural history of snakes making the latest scientific research accessible to a general audience When addressing myths about snakes he explains how researchers use the scientific method to explain which parts of the myth are biologically plausible and which are not Steen also takes a close look at conventional wisdom and common advice about snakes For example people are told they can distinguish coralsnakes from non venomous mimics by remembering the rhyme red on black friend of Jack red on yellow kill a fellow but this tip is only relevant to coralsnakes and two mimics living in the southeastern United States and it does not always work with other species or in other countries Enhanced by more than 100 stunning color photographs and three original drawings Secrets of Snakes The Science beyond the Myths encourages readers to learn about the snakes around them and introduces them to how scientists use the scientific method and critical thinking to learn about the natural world Number Sixty one W L Moody Jr Natural History Series Computer Vision -- ACCV 2009 Hongbin Zha,Rin-ichiro Taniguchi,Stephen

Filippov,Stanislav N. Gorb,2020-06-30 Basic laws of nature are rather simple but observed biological structures and their dynamic behaviors are unbelievably complicated This book is devoted to a study of this strange relationship by applying mathematical modeling to various structures and phenomena in biology such as surface patterns bioadhesion locomotion predator prey behavior seed dispersal etc and revealing a kind of self organization in these phenomena In spite of diversity of biological systems considered two main questions are 1 what does self organization in biology mean mathematically and 2 how one can apply this knowledge to generate new knowledge about behavior of particular biological system We believe that this kind of biomimetics in computer will lead to better understanding of biological phenomena and possibly towards development of technical implications based on our modeling
