Low Fat Meats Design Strategies And Human Implications:

Low-Fat Meats Harold D. Hafs, Robert G. Zimbelman, 2012-12-02 This treatise embraces all of the various efforts to reduce fat in meat Establishing methods such as breeding and feeding to control fatness are covered but emphasis is on emerging technologies including meat processing and partitioning agents to reduce fat Human implicaitons such as health social ethical and economic factors are given special attention Sensory charcteristics of low fat meat animal well being and two new directions for the future are also discussed Low Fat Meats Design Strategies and Human Implications provides an up to date overview of the technologies to produce low fat meat with a balanced discussion of the issues Paying speical attention to health social ethical and economic implications inherent in developing low fat meats this volume also discusses sensory characteristics of low fat meat animal well being and new directions for the future Production and Processing of Healthy Meat, Poultry and Fish Products A.M. Pearson, T.R. Dutson, 2013-03-09 The central theme for this volume was chosen since consumers have great interest in purchasing low fat low salt and reduced cholesterol meat poultry and fish products As in past volumes experts in the field have been chosen to write chapters with emphasis on their breadth of knowl edge in each specific area Efforts were also made to obtain authors from different countries in order to give the book a worldwide perspective Chapter I stresses the nutritional and sensory properties that meat poultry and fish products make to healthful diets and discusses consumer concerns about these products Chapter 2 covers dietary recommendations in major consumer nations along with data from food composition tables and the dietary contributions of meat poultry and fish to meeting dietary needs Chapter 3 discusses the labeling of low and reduced fat salt prod ucts which although written mainly from the US viewpoint may serve as a model for labeling in other countries Chapter 4 reviews the rationale for reducing fat energy levels in muscle foods problems encountered in their production and how these may be solved Chapter 5 discusses the scientific basis for reducing the salt sodium content in food products and the health benefits derived from lowering salt intake Methods of reducing the cholesterol content of these animal products is reviewed in Chapter 6 Food Biotechnology in Ethical Perspective Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives on biotechnology Thompson s unique and insightful approach to addressing the risks and

questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system

Hand Book of Processed Functional Meat Products
Sajad A. Rather, F. A. Masoodi, 2024-10-22 Functional food technology aims to boost consumer well being by providing health benefits beyond that of fundamental nutrition Meat and meat products have numerous disease preventing and health promoting benefits However the meat industry has faced many new challenges since the World Health Organization WHO studies suggesting that small increases in the risk of several cancers may be associated with high consumption of processed meat In addition consumers often associate meat with a negative health image This negative image of meat is mainly due to fat content such as saturated fatty acids and cholesterol and process induced toxicants like N nitroso compounds and polycyclic aromatic hydrocarbons PAHs and the alliance of these with chronic diseases In this context the functional food concept applied to meat processing has gained importance especially by reduction replacement of fat sodium nitrites reduction of process induced toxicants and addition of beneficial components such as probiotics and bioactive compounds

Hand Book of Processed Functional Meat Products provides meat industry professionals with a step by step guide to post mortem muscle chemistry functional and cultured meat products design and development bioactive compounds reduction of carcinogenic compounds application of enzymes and nanotechnology innovation in sensory assessment authentication and marketing 3D printing in the development of meat based products and regulatory and consumer challenges in functional meat products This book differs from other publications on functional meat product processing in that it offers comprehensive coverage and in depth discussion of the most recent scientific and technological applications in functional meat products Many meat science and technology books available on the market describe meat chemistry properties and basic science with only a rudimentary understanding of meat processing functional meat products development and applications Therefore this work will be helpful for food industry professionals policy makers researchers students teachers and nutritionists and dieticians for a complete and up to date overview of functional meats processing and quality evaluation

Handbook of Food Products Manufacturing Nirmal Sinha, 2007-04-23 The Handbook of Food Products Manufacturing is a definitive master reference providing an overview of food manufacturing in general and then covering the processing and manufacturing of more than 100 of the most common food products With editors and contributors from 24 countries in North America Europe and Asia this guide provides international expertise and a truly global perspective on food manufacturing

Functional Foods Navnidhi Chhikara, Anil Panghal, Gaurav Chaudhary, 2022-03-29 Functional Foods Presenting cutting edge information on new and emerging food engineering processes Functional Foods the second volume in the groundbreaking new series Bioprocessing in Food Science is an essential reference on the modeling quality safety and

technologies associated with food processing operations today Functional Foods the second volume in series Bioprocessing in Food Science is an up to date comprehensive volume covering the preparation processes and health benefits of functional foods Written and edited by a team of experts in the field this important new volume provides readers extensive knowledge about different types of traditional and commercially available functional foods from different sources such as milk meat cereals millets and fruits and vegetables The main objective of this book is to disseminate knowledge about the recent technologies developed in the field of functional foods to students researchers and industry professionals This will enable them to make crucial decisions regarding the adoption implementation economics and constraints of the different technologies As the demand for healthy food is increasing manufacturers are searching for new possibilities for occupying a growing share in the rapidly changing food market Covering the use of conventional and non conventional sources prebiotics probiotics and many other topics with emphasis on their functionality in food systems this volume also provides insights on the specific packaging requirements for functional foods with maximum illustrations of how to enhance shelf life and create superior quality products The authors and editors discuss the need for regulatory frameworks government bodies guidelines and their challenges within the context of the functional food market Whether for the veteran engineer or scientist the student or a manager or other technician working in the field this volume is a must have for any library This outstanding new volume Discusses an overview of functional foods including global regulations legislations and packaging requirements Provides knowledge of functional ingredients and health benefits of functional foods from different plants animals and microbes sources Acquaints the readers about technological aspects for functional ingredients delivery Addresses the basic to advanced aspects of different functional foods combining the requirements health benefits and regulations showcasing the development of functional food products with potential functional benefits Audience Process and chemical engineers chemists engineers in other disciplines managers researchers scientists students and teachers working in the field of food engineering and processing

Biology of Metabolism in Growing Animals Douglas Burrin, PhD, Harry J. Nutrition Abstracts and Reviews ,2005 **Before Dinner** M. Korthals,2008-11-09 This book is an extensive original and systematic treatment of many important philosophical and ethical aspects of food consumption and production May we eat just anything Can we do everything with animals even genetic modification If not how can we regulate those processes so that they lead to optimum animal welfare while at the same time producing optimum taste The production of food also causes environmental pollution does the fight against hunger have priority over the care of the environment The care of the environment animal welfare and the quality of food should be in a certain harmony but that is far from granted and hardly easy to achieve These factors are often in conflict with each other and a balance will thus need to be searched for Other factors to take into consideration are the issue of global famine the care for a farming class that is able to keep its head above water in a decent way and a fair trade system that does not throw up unnecessary barriers for newcomers or small market participants and that promotes good nutrition Famine continues to be a widespread phenomenon that violates human rights causing nearly a billion people to suffer from hunger or malnutrition At the same time deliberate hunger abundance and obesity are prevalent in the Western world Both issues refer to the social and cultural aspects of food Scientific and technological developments like genetic modification and functional food also play an increasingly important role almost every bite that we take is determined by scientific developments An extra difficulty is that scientific information is often contradictory or that it relies on statistical probabilities that are difficult to translate into everyday certitudes All of these factors deserve attention but it is the mix that is most important In the land of food either or does not exist only both and The adequate measure of both and serves as the starting point for this philosophical reflection Before Dinner is a must read for all people interested in contemporary ethical issues of food such as university students and researchers of food agricultural and life sciences as well as policymakers in these fields such as members of professional organisations focusing on food and agriculture f e EURSAFE European Society for Agriculture and Food Ethics the Agriculture Food and Human Values Society USA and European Federation of Biotechnology
