The Big Heart Mulk Raj Anand,2015-03-10 The Big Heart is a moving tale of conflict love and passion centred on a group of craftsmen trying to come to grips with automation that threatens their livelihood and traditional way of life Ananta a coppersmith returns to his home town of Amritsar after having worked in the more industrialised cities of Bombay and Ahmedabad Like most people of his craft he has difficulty making a living as the introduction of machines is throwing the craftsmen out of work The coppersmiths face both destitution and a break up of their whole society based on age old traditions and customs Yet Ananta can see both the utility and the inevitability of the machines and the need for the coppersmiths to band together so that power of the machine could offer a new life for those whom it threatens But unsettled tense and suspicious as the coppersmiths are a spark of demagoguery culminates in violence and wanton destruction which ends in sudden unexpected tragedy The Big Heart is a memorable work It is passionate earthy and urgent It is also timeless in that it is an evocative story of the churn and roil that change and modernity always create in their wake In Ananta Mulk Raj Anand gives us an unforgettable character He is virile and passionate brave strong and tender of large appetites yet caring and generous of spirit Though unlettered Ananta intuitively grasps that the conflict created by the coming of the machines can only be resolved by a spirit of understanding and accommodation on all sides Thus a big heart alone can help society meet the existential challenge that change throws up especially for those less prepared for it Equally Anand draws a vivid portrait of the Punjab and its people his language infused with the clamour sights and smells of the land

company that can actually create feelings as though a person were experiencing them naturally Heart of the Machine explores the next giant step in the relationship between humans and technology the ability of computers to recognize respond to and even replicate emotions Computers have long been integral to our lives and their advances continue at an exponential rate Many believe that artificial intelligence equal or superior to human intelligence will happen in the not too distance future some even think machine consciousness will follow Futurist Richard Yonck argues that emotion the first most basic and most natural form of communication is at the heart of how we will soon work with and use computers Instilling emotions into computers is the next leap in our centuries old obsession with creating machines that replicate humans But for every benefit this progress may bring to our lives there is a possible pitfall Emotion recognition could lead to advanced surveillance and the same technology that can manipulate our feelings could become a method of mass control And as shown in movies like Her and Ex Machina our society already holds a deep seated anxiety about what might happen if machines could actually feel and break free from our control Heart of the Machine is an exploration of the new and inevitable ways in which mankind and technology will interact The paperback edition has a new foreword by Rana el Kaliouby PhD a pioneer in artificial emotional intelligence as well as the cofounder and CEO of Affectiva the acclaimed AI startup spun off from the MIT Media Lab

Sociology Beyond Societies John Urry, 2012-11-12 In this ground breaking contribution to social theory John Urry argues that the traditional basis of sociology the study of society is outmoded in an increasingly borderless world If sociology is to make a pertinent contribution to the post societal era it must forget the social rigidities of the pre global order and instead switch its focus to the study of both physical and virtual movement In considering this sociology of mobilities the book concerns itself with the travels of people ideas images messages waste products and money across international borders and the implications these mobilities have to our experiences of time space dwelling and citizenship Sociology Beyond Society extends recent debate about globalisation both by providing an analysis of how mobilities reconstitute social life in uneven and complex ways and by arguing for the significance of objects senses and time and space in the theorising of contemporary life This book will be essential reading for undergraduates and graduates studying sociology and cultural geography
