Harivardhan Reddy, Patrick Couvreur, 2010-03-20 In spite of the development of various anticancer drugs the therapy of cancer has

remained challenging for decades The current therapy of cancer is overwhelmed because of the inability to deliver therapeutics to all regions of a tumor in effective therapeutic concentrations intrinsic or acquired resistance to the treatment with currently available agents via genetic and epigenetic mechanisms and toxicity As a result cancer therapy using conventional therapeutics and different types of treatment regimens using this therapeutics has not led to a convincing survival benefit of the patients In this context Macromolecular therapeutics offer several advantages over conventional low molecular therapeutics by various ways such as enable the use of larger doses of these agents by limiting the toxicity by enhanced permeability and retention into tumors by tumor targeting using tumor specific antibodies by specific inhibition of oncogenes using anticancer oligonucleotides etc Cancer treatment using this macromolecular therapeutics has considerably improved the survival benefit for patients As a result various macromolecular therapeutics are already commercialized or are under clinical development Although we are far from a real magic bullet today looking at the pace of research and current success in this field of macromolecular therapeutics it appears that we are approaching a magic bullet for the efficient treatment of cancer Thus we believe that the subject of this book is very timely and that the book will fill an unmet need in the market This book is unique and assembles various types and aspects of macromolecular anticancer therapeutics for cancer therapy in one shell and conveys the importance of this interdisciplinary field to the broad audience Thus in a nutshell this book details the basics of cancer and various therapeutic strategies such as those based on macromolecular therapeutics hence can become an important reference for practitioners oncologists medical pharmacologists medicinal chemists biomedical scientists experimental pharmacologists pharmaceutical technologists and particularly it can essentially become a handbook of macromolecular therapeutics for cancer therapy for graduates post graduates and Ph D students in these fields

Neoplastic Transformation in Human Cell Culture John S. Rhim, Anatoly Dritschilo, 2012-12-06 The role of carcinogenic agents in the development of human cancers is now being defined using a variety of human cells as experimental model systems A workshop on neoplastic transformation in human cell systems in vitro mechanisms of carcinogenesis was held at the Georgetown University Medical Center Washington DC on April 25-26 1991 The aims of the workshop were to present the state of the art in the transformation of human cells in culture as well as to provide insight into the molecular and cellular changes involved in the conversion of normal cells to a neoplastic state of growth The following topics were closely related to the theme of the workshops 1 Derivation of in vitro model systems epithelial fibroblastic and hematopoietic 2 Factors modulating cellular transformation 3 Usefulness of defined in vitro model systems for viral chemical and radiation carcinogenesis 4 Multistep nature of human cell carcinogenesis 5 Role of activated and suppressor oncogenes in neoplastic transformation The workshop was organized by J S Rhim and A Dritschilo cochairmen G Jay J Little M McCormick R Tennant and R R Weischelbaum There were 32 speakers 30 poster presentations and about 190 participants

Epstein-Barr Virus and Human Disease • 1988 D. V. Ablashi, A. Faggioni, G. R. F. Krueger, J. S. Pagano, G. R. Pearson, 2012-12-06 Epstein Barr virus EBV is one of the most widespread human viruses with over 80% of the general population exposed by young adulthood as determined by antibody studies Initial infection usually occurs during childhood or the teenage years It is clear that depending on the age of the recipient clinical manifestations of the primary infection can vary It has been known for 20 years that EBV is the etiologic agent of acute infectious mononucleosis IM and is also closely associated with African Burkitt's lymphoma BL and nasopharyngeal carcinoma NPC There is increasing evidence that EBV is a factor in the etiology of B cell lymphomas which arise at a high frequency in immunodeficient populations EBV may also contribute to the development of autoimmune disease Thus this virus continues to attract world wide attention The major target cell for EBV infection has now been conclusively identified as the complement receptor type 2 CR2 the CD22 receptor on B lymphocyte It is apparent however that other cells also can become infected by EBV such as epithelial cells in the parotid gland and other epithelial cells in the upper respiratory tract This might help account for the EBV associated carcinomas of the upper respiratory tract The first in a series of international symposia on EBV associated diseases focused primarily on Burkitt's type

lymphomas or on NPC Kyoto 1977 Dusseldorf 1980 Kuala Lumpur 1982 and emphasized mainly the clinical elements of these diseases Subsequent symposia Loutraki 1984 St *Analytical Affinity Chromatography* Irwin M. Chaiken, 2018-01-10 This volume presents discussions of theoretical and experimental considerations that have led to the analytical affinity chromatography field as well as current efforts to use this methodology to characterize the interaction mechanisms of biological macromolecules and to establish conditions for employing bioaffinity chromatographic systems as preparative tools The chapters include a comprehensive discussion of interactive chromatography theory DeLisi and Hethcote a review of experimental data obtained for biological macromolecules and the relevant theoretical considerations of affinity chromatography which led to them Swaisgood and Chaiken an evaluation of rate processes in affinity chromatography and the potential to determine biologically meaningful chemical rate constants Walters and the use of quantitative and molecular considerations to design affinity chromatographic systems Stellwagen and Liu **Current Catalog** ,1988 First multi year cumulation covers six years 1965 70 Surface Engineering of Polymeric Biomaterials Todorka G Vladkova, 2013-01-10 Biomaterials work in contact with living matter and this gives a number of specific requirements for their surface properties such as bioinertness or bioactivity antibiofouling and so on Surface engineering based on physical chemical physical chemical biochemical or biological principles is important for the preparation of biomaterials with the desired biocontact properties This book helps the reader gain the knowledge to enable them to work in such a rapidly developing area with a comprehensive list of references given for each chapter Strategies for tailoring the biological response through the creation of biomaterial surfaces resistant to fouling are discussed Methods of eliciting specific biomolecular interactions that can be further combined with patterning techniques to engineer adhesive areas in a noninteractive background are also covered The theoretical basis of surface engineering for improvement of biocontact properties of polymeric biomaterials as well as the current state of the art of the surface engineering of polymeric biomaterials are presented The book also includes information on the most used conventional and advanced surface engineering methods The book is targeted at researchers post doctorates graduate students and those already working in the field of biomaterials with a special interest in the creation of polymeric materials with improved biocontact properties via surface engineering The Resistance Arteries William Halpern, John A. Bevan, Joseph Brayden, Harriet Dustan, Mark Nelson, George Osol, 2013-06-29 *Molecular Mechanisms of Alcohol* Grace Y. Sun, P. Kevin Rudeen, W. Gibson Wood, Yau Huei Wei, Albert Y. Sun, 2012-12-06 Alcohol abuse throughout the world is associated with serious social and medical implications Problems such as intoxication tolerance and development of physical dependence have been well recognized The central nervous system and the liver are especially affected There is little doubt that alcohol abuse can result in organ damage which in turn leads to deleterious health consequences to the individual Understanding ethanol action presents a special and functional diver challenge because of its molecular simplicity In fact the ability for alcohol to disrupt cellular function is attributed to its cellular injury without

regard to an apparent specific mechanism of action Nevertheless the key to an effective treatment to this problem is through research into understanding the mechanisms underlying how ethanol interacts with cells and membranes This book is the result of a cooperative effort among scientists from many nations who met in a symposium in Taipei Taiwan ROC July 1988 The focus of this book is on experimental approaches to better understand the molecular mechanisms of ethanol on the biological system These recent advances in the examination of the alcohol effects on cellular function are divided into four sections The first section addresses specific actions of ethanol on the central nervous system The second section is directed to the use of cell cultures in ethanol research and the usefulness of cell cultures in examination of the effects of ethanol in vitro
