Allen, Tatsuji Nomura, National Institutes of Health (U.S.). Division of Research Services, 1986 *The Welfare of Laboratory Animals* Eila Kaliste, 2007-04-18 Animal welfare is attracting increasing interest worldwide but particularly from those in developed countries who now have the knowledge and resources to be able to offer the best management systems for their farm animals as well as potentially being able to offer plentiful resources for companion zoo and laboratory animals The increased

attention given to animal welfare in the West derives largely from the fact that the relentless pursuit of financial reward and efficiency has led to the development of intensive animal production systems that offend the conscience of many consumers in those countries. In developing countries human survival is still a daily uncertainty so that provision for animal welfare has to be balanced against human welfare. Welfare is usually provided for only if it supports the output of the animal be it food work clothing sport or companionship. In reality there are resources for all if they are properly husbanded in both developing and developed countries. The inequitable division of the world's riches creates physical and psychological poverty for humans and animals alike in all sectors of the world. Livestock are the world's biggest land user (FAO 2002) and the population particularly of monogastric animals is increasing rapidly to meet the need of an expanding human population. Populations of animals managed by humans are therefore increasing worldwide so there is the tendency to allocate fewer resources to each one.

Microbial Status and Genetic Evaluation of Mice and Rats National Research Council, Institute for Laboratory Animal Research, International Committee of the Institute for Laboratory Animal Research, 2000-10-30. US Japan meetings on laboratory animal science have been held virtually every year since 1980 under the US Japan Cooperative Program on Science and Technology. Over the years these meetings have resulted in a number of important documents including the Manual of Microbiologic Monitoring of Laboratory Animals published in 1994 and the article Establishment and Preservation of Reference Inbred Strains of Rats for General Purposes. In addition to these publications the meetings have been instrumental in increasing awareness of the need for microbiologic monitoring of laboratory rodents and the need for genetic definition and monitoring of mice and rats. In cooperation with the Comparative Medicine section of NCRR NIH the ILAR Council and staff are pleased to become the host for this important annual meeting and look forward to participating in future meetings. The support and sponsorship of NCRR P40 RR 11611 in the United States and the Central Institute for Experimental Animals in Japan are gratefully acknowledged. Bringing together the leading scientists in the field of laboratory animal care has resulted in increased understanding of American and Japanese approaches to laboratory animal science and should continue to strengthen efforts to harmonize approaches aimed at resolving common challenges in the use of animal models for biomedical research and testing.
