Le deuxième chapitre présente les notions fondamentales de l'optique et de l'inspection télévisuelle afin d'aider le lecteur à la bonne compréhension du reste du guide. Le troisième chapitre présente les facteurs influents de l'examen télévisuel analysés inspirant de la méthode des 5M. Elle décrit également des accessoires qu'il est possible d'utiliser en fonction des besoins et une liste non exhaustive de solutions pour résoudre différentes problématiques. Le cinquième chapitre se focalise sur l'évaluation de la performance du système télévisuel au moyen de mires de résolution de pixels de référence avec défaut naturel ou artificiel. Les notions de seuil d'évaluation et de caractérisation des indications y sont également abordées car directement en lien avec la performance du procédé utilisé. Le sixième chapitre évoque les possibilités d'automatisation du contrôle et de l'interprétation, notamment lorsque les cadences de contrôle sont élevées que l'étendue de l'examen est importante ou que l'on veut s'affranchir du facteur humain. Le guide comprend également des annexes techniques détaillées ainsi qu'une bibliographie qui reprend les normes et documents de référence relatifs au contrôle visuel.
