A History of the World in 12 Maps Jerry Brotton,2014-10-28 A New York Times Bestseller Maps allow the armchair traveler to roam the world the diplomat to argue his points the ruler to administer his country the warrior to plan his campaigns and the propagandist to boost his cause rich and beautiful Wall Street Journal Throughout history maps have been fundamental in shaping our view of the world and our place in it But far from being purely scientific objects maps of the world are unavoidably ideological and subjective intimately bound up with the systems of power and authority of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age In this scintillating book Jerry Brotton examines the significance of 12 maps from the almost mystical representations of ancient history to the satellite derived imagery of today He vividly recreates the environments and circumstances in which each of the maps was made showing how each conveys a highly individual view of the world Brotton shows how each of his maps both influenced and reflected contemporary events and how by considering it in all its nuances and omissions we can better understand the world that produced it Although the way we map our surroundings is more precise than ever before Brotton argues that maps today are no more definitive or objective than they have ever been Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again A fascinating and panoramic new history of the cartographer s art The Guardian The intellectual background to these images is conveyed with beguiling erudition There is nothing more subversive than a map The Spectator A mesmerizing and beautifully illustrated book The Telegraph

the ways in which astronomy was used in the service of religion It continues with discussions of the importance of Islamic instruments and scientific manuscript illustrations Three studies deal with the regional schools that developed in Islamic astronomy in this case Egypt and the Maghrib Another focuses on a curious astrological table for calculating the length of life of any individual The notion of the world centred on the sacred Kaaba in Mecca inspired both astronomers and proponents of folk astronomy to propose methods for finding the qibla or sacred direction towards the Kaaba their activities are surveyed here The interaction between the mathematical and folk traditions in astronomy is then illustrated by an 11th century text on the qibla in Transoxania The last three studies deal with an account of the geodetic measurements sponsored by the Caliph al Ma'mun in the 9th century a world map in the tradition of the 11th century polymath al Biruni alas corrupted by careless copying and a table of geographical coordinates from 15th century Egypt
