Getting Started with Maple 2nd Edition with Student Edition Release 10 Set C-K Cheung, G. E. Keough, Michael S. J. May, 2005-12-01 Introduction to Queueing Networks J. MacGregor Smith, 2018-08-28 The book examines the performance and optimization of systems where queueing and congestion are important constructs Both finite and infinite queueing systems are examined Many examples and case studies are utilized to indicate the breadth and depth of the queueing systems and their range of applicability Blocking of these processes is very important and the book shows how to deal with this problem in an effective way and not only compute the performance measures of throughput cycle times and WIP but also to optimize the resources within these systems The book is aimed at advanced undergraduate graduate and professionals and academics interested in network design queueing performance models and their optimization It assumes that the audience is fairly sophisticated in their mathematical understanding although the explanations of the topics within the book are fairly detailed Making Presentation Math Computable André Greiner-Petter, 2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today's publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book **CAEN Newsletter** University of Michigan. Mohana Shankar, 2017-05-05 This book offers a comprehensive overview of fading and shadowing in wireless channels A number of statistical models including simple hybrid compound and cascaded ones are presented along with a detailed discussion of diversity techniques employed to mitigate the

effects of fading and shadowing The effects of co channel interference before and after the implementation of diversity are also analyzed To facilitate easy understanding of the models and the analysis the background on probability and random variables is presented with relevant derivations of densities of the sums products ratios as well as order statistics of random variables The book also provides material on digital modems of interest in wireless systems The updated edition expands the background materials on probability by offering sections on Laplace and Mellin transforms parameter estimation statistical testing and receiver operating characteristics Newer models for fading shadowing and shadowed fading are included along with the analysis of diversity combining algorithms In addition this edition contains a new chapter on Cognitive Radio Based on the response from readers of the First Edition detailed Matlab scripts used in the preparation of this edition are provided Wherever necessary Maple scripts used are also provided
