Marcel Simulating The Novice Programmer:

MARCEL James C. Spohrer, 1992 This volume describes a cognitive model of student programmers and an implementation of that model that allows student programmers to be simulated The focus of the model is on the problem solving that students perform to generate both correct and buggy programs as well as on the individual differences that cause different students to generate different programs for the same programming task By developing a taxonomy of student programmer knowledge a model of student program generation and a preliminary model of individual differences this research contributes to a better understanding of four areas of the study of student programmers The most important claim is that a cognitive model of student program generation fits within a properly fleshed out generate test and debug GTD problem solving architecture in which impasse repair knowledge plays a key role This research is important theoretically because it explores the use of a GTD impasse repair problem solving architecture in a new domain and important practically because of its educational implications for programming instructions

Learner-Centered Design of Computing Education Mark Guzdial, 2022-05-31 Computing education is in enormous demand Many students both children and adult are realizing that they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn't just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone

Integration of Natural Language and Vision Processing Paul Mc Kevitt, 2012-12-06 Although there has been much progress in developing theories models and systems in the areas of natural language processing NLP and vision processing VP there has hitherto been little progress in integrating these two subareas of artificial intelligence The papers in *Integration of Natural Language and Vision Processing* focus on site descriptions such as the work at Apple Computer California and the DFKI Saarbrücken on historical surveys and philosophical issues on systems that have been built enabling communication through text speech sound touch video graphics and icons and on the automatic presentation of information whether it be in the form of instruction manuals statistical data or visualisation of language There is also a review of Mark Maybury's book *Intelligent Multimedia Interfaces* Audience Vital reading for all interested in the SuperInformationHighways of the future

Making Software Andy Oram, Greg Wilson, 2010-10-14 Many

claims are made about how certain tools technologies and practices improve software development But which claims are verifiable and which are merely wishful thinking In this book leading thinkers such as Steve McConnell Barry Boehm and Barbara Kitchenham offer essays that uncover the truth and unmask myths commonly held among the software development community Their insights may surprise you Are some programmers really ten times more productive than others Does writing tests first help you develop better code faster Can code metrics predict the number of bugs in a piece of software Do design patterns actually make better software What effect does personality have on pair programming What matters more how far apart people are geographically or how far apart they are in the org chart Contributors include Jorge Aranda Tom Ball Victor R Basili Andrew Begel Christian Bird Barry Boehm Marcelo Cataldo Steven Clarke Jason Cohen Robert DeLine Madeline Diep Hakan Erdogmus Michael Godfrey Mark Guzdial Jo E Hannay Ahmed E Hassan Israel Herraiz Kim Sebastian Herzig Cory Kapser Barbara Kitchenham Andrew Ko Lucas Layman Steve McConnell Tim Menzies Gail Murphy Nachi Nagappan Thomas J Ostrand Dewayne Perry Marian Petre Lutz Prechelt Rahul Premraj Forrest Shull Beth Simon Diomidis Spinellis Neil Thomas Walter Tichy Burak Turhan Elaine J Weyuker Michele A Whitecraft Laurie Williams Wendy M Williams Andreas Zeller Thomas Zimmermann 1994 IEEE International Conference on Systems, Man, and Cybernetics ,1994

Greenberg,Gautam Mitra,Freerk A. Lootsma,Marcel J. Rijckaert,Hans J. Zimmermann,2012-12-06 It is quite an onerous task to edit the proceedings of a two week long institute with learned contributors from many parts of the world All the same the editorial team has found the process of refereeing and reviewing the contributions worthwhile and completing the volume has proven to be a satisfying task In setting up the institute we had considered models and methods taken from a number of different disciplines As a result the whole institute preparing for it attending it and editing the proceedings proved to be an intense learning experience for us Here I speak on behalf of the committee and the editorial team By the time the institute took place the papers were delivered and the delegates exchanged their views the structure of the topics covered and their relative positioning appeared in a different light In editing the volume I felt compelled to introduce a new structure in grouping the papers The contents of this volume are organised in eight main sections set out below 1 Abstracts 2 Review Paper 3 Models with Multiple Criteria and Single or Multiple Decision Makers 4 Use of Optimisation Models as Decision Support Tools 5 Role of Information Systems in Decision Making Database and Model Management Issues 6 Methods of
