Introduction to Radio Engineering Nathan Blaunstein, Christos Christodoulou, Mikhail Sergeev, 2016-10-14 The book introduces the basic foundations of high mathematics and vector algebra Then it explains the basic aspects of classical electrodynamics and electromagnetism Based on such knowledge readers investigate various radio propagation problems related to guiding structures connecting electronic devices with antenna terminals placed at the different radar systems It explains the role of antennas in process of transmission of radio signals between the terminals Finally it shows the relation between the main operational charactistics of each kind of radar and the corresponding knowledge obtained from the Educating the Engineer of 2020 National Academy of Engineering, 2005-11-06 Educating the Engineer of 2020 is grounded by the observations questions and conclusions presented in the best selling book The Engineer of 2020 Visions of Engineering in the New Century This new book offers recommendations on how to enrich and broaden engineering education so graduates are better prepared to work in a constantly changing global economy It notes the importance of improving recruitment and retention of students and making the learning experience more meaningful to them It also discusses the value of considering changes in engineering education in the broader context of enhancing the status of the engineering profession and improving the public understanding of engineering Although certain basics of engineering will not change in the future the explosion of knowledge the global economy and the way engineers work will reflect an ongoing evolution If the United States is to maintain its economic leadership and be able to sustain its share of high technology jobs it must prepare for this wave of change Advances in Swarm Intelligence Ying Tan, Yuhui Shi, Wenjian Luo, 2023-07-07 This two volume set LNCS 13968 and 13969 constitutes the proceedings of the 14th International Conference on Advances in Swarm Intelligence ICSI 2023 which took place in Shenzhen China China in July 2023 The theme of this year's conference was Serving Life with Swarm Intelligence The 81 full papers presented were carefully reviewed and selected from 170 submissions The papers are organized into 12 cohesive sections covering major topics of swarm intelligence research and its development and applications The papers of the second part cover topics such as Swarm Robotics and UAV Machine Learning Data Mining Routing and Scheduling Problems Stock Prediction and Portfolio Optimization ICSI Optimization *Iris Runge* Renate Tobies, 2012-01-05 This book concerns the origins of mathematical problem solving at the Competition internationally active Osram and Telefunken Corporations during the golden years of broadcasting and electron tube research The woman scientist Iris Runge who received an interdisciplinary education at the University of G ttingen was long employed as the sole mathematical authority at these companies in Berlin It will be shown how mathematical connections were made between statistics and quality control and between physical chemical models and the actual problems of mass production The organization of industrial laboratories the relationship between theoretical and experimental work and the role of mathematicians in these settings will also be explained By investigating the social economic and political conditions that unfolded from the time of the German Empire until the end of the Second World War the book hopes to build a bridge

between specialized fields mathematics and engineering and the general culture of a particular era It hopes furthermore to build a bridge between the history of science and industry on the one hand and the fields of Gender and Women's Studies on the other Finally by examining the life and work of numerous industrial researchers insight will be offered into the conditions that enabled a woman to achieve a prominent professional position during a time when women were typically excluded from the scientific workforce Distributed Computer Systems H. S. M. Zedan, 2014-05-12 Distributed Computer Systems Theory and Practice is a collection of papers dealing with the design and implementation of operating systems including distributed systems such as the amoeba system argus Andrew and grapevine One paper discusses the concepts and notations for concurrent programming particularly language notation used in computer programming synchronization methods and also compares three classes of languages Another paper explains load balancing or load redistribution to improve system performance namely static balancing and adaptive load balancing For program efficiency the user can choose from various debugging approaches to locate or fix errors without significantly disturbing the program behavior Examples of debuggers pertain to the ada language and the occam programming language Another paper describes the architecture of a real time distributed database system used for computer network management monitoring integration as well as administration and control of both local area or wide area communications networks The book can prove helpful to programmers computer engineers computer technicians and computer instructors dealing with many aspects of computers such as programming hardware interface networking engineering or design
