microeconomic theory relies heavily on the concept of rational actors who possess perfect information stable preferences and unlimited computational capacity These agents operate in markets characterized by perfect competition complete contracts and instantaneous adjustment to equilibrium While these assumptions provide mathematical tractability and theoretical elegance they often fail to capture the nuanced behaviors observed in actual markets Advanced microeconomic analysis recognizes these limitations and incorporates more realistic assumptions about human behavior and market structures Behavioral economics for instance has demonstrated that individuals frequently deviate from pure rationality exhibiting systematic biases bounded rationality and preference inconsistencies These deviations are not merely random errors but follow predictable patterns that can be incorporated into more sophisticated models of economic behavior

Microeconomics R. Shone,2014-05-10 Microeconomics A Modern Treatment focuses on modern approaches to microeconomics Alternative systems are discussed including input output analysis as against neoclassical production theory The theory of choice and the preference and utility approaches to consumer theory are also considered along with linear and nonlinear theories of production the theory of market demand and supply and welfare economics Comprised of 11 chapters this book begins with an introduction to economic science and its propositions as well as the importance of establishing a clearly defined set of postulates on which the whole edifice of economic knowledge rests The discussion then turns to the theory of choice and the preference and utility approaches to consumer theory neoclassical as opposed to modern consumer choice production theory and the production set of the economy and the theory of market demand and supply Subsequent chapters deal with the theory of exchange and general equilibrium welfare economics and stability and introductory dynamics This monograph will be of value to economists and those interested in microeconomics Lectures In The Microeconomics Of Choice: Foundations, Consumers, And Producers William David Anthony Bryant,2023-02-17 People pursue their own interests whatever those interests might be Some people have interests that are narrow and selfish while others have interests that are broad and altruistic The idea that people are self interested underpins all of economic analysis

and raises two fundamental questions 1 How do people choose the actions they think will further their own interests 2 Can the potentially conflicting interests of different people be made to mesh in some sort of socio economic equilibrium This book is devoted to a detailed study of the first question Its Companion Volume Economy Wide Microeconomics Equilibrium Optimality Applications and Tests makes a detailed study of the second question Following some foundational remarks this book studies the Arrow Debreu theory of consumer choice That theory supposes people choose so as to maximize a complete continuous transitive and reflexive binary preference relation over a non empty and compact choice set The book then studies numerous refinements generalizations and extensions of each of these restrictions up to and including recent work on Behavioral theories of choice and choice behaviour when preferences are intransitive incomplete discontinuous Also considered is choice behaviour in environments that are not necessarily compact A study is also made of intertemporal choice and choice under uncertainty The study of Arrow Debreu choice theory and its extensions are presented from the Primal Dual and Revealed Preference points of view Consumers are not the only agents in the economy as Producers are present as well Beginning with a study of the Arrow Debreu idea that producers choose from a convex production set so as to maximize profit the book considers extensions and generalizations of this framework particularly to non convex environments The study is presented from the Primal and Dual points of view The final chapter in the book provides a link to its Companion Volume The Chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above Resources are available to instructors who adopt this book More details at www.worldscientific.com/worldscibooks/10.1142/12789_sm

Computable Foundations for Economics K. Vela

Velupillai,2012-07-26 Computable Foundations for Economics is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon s work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics
