Mathematical Logic And Foundations Of Set Theory:

Foundations of Set Theory A.A. Fraenkel, Y. Bar-Hillel, A. Levy, 1973-12-01 *Foundations of Set Theory* discusses the reconstruction undergone by set theory in the hands of Brouwer Russell and Zermelo Only in the axiomatic foundations however have there been such extensive almost revolutionary developments This book tries to avoid a detailed discussion of those topics which would have required heavy technical machinery while describing the major results obtained in their treatment if these results could be stated in relatively non technical terms This book comprises five chapters and begins with a discussion of the antinomies that led to the reconstruction of set theory as it was known before It then moves to the axiomatic foundations of set theory including a discussion of the basic notions of equality and extensionality and axioms of comprehension and infinity The next chapters discuss type theoretical approaches including the ideal calculus the theory of types and Quine s mathematical logic and new foundations intuitionistic conceptions of mathematics and its constructive character and metamathematical and semantical approaches such as the Hilbert program This book will be of interest to mathematicians logicians and statisticians

Mathematical Logic and Foundations of Set Theory Yehoshua Bar-Hillel,1970 *MATHEMATICAL LOGIC AND FOUNDATIONS OF SET THEORY- PROCEEDINGS OF AN INTERNATIONAL COLLOQUIUM. , The Foundations of Mathematics* Kenneth Kunen,2009 Mathematical logic grew out of philosophical questions regarding the foundations of mathematics but logic has now outgrown its philosophical roots and has become an integral part of mathematics in general This book is designed for students who plan to specialize in logic as well as for those who are interested in the applications of logic to other areas of mathematics Used as a text it could form the basis of a beginning graduate level course There are three main chapters Set Theory Model Theory and Recursion Theory The Set Theory chapter describes the set theoretic foundations of all of mathematics based on the ZFC axioms It also covers technical results about the Axiom of Choice well orderings and the theory of uncountable cardinals The Model Theory chapter discusses predicate logic and formal proofs and

covers the Completeness Compactness and Lowenheim Skolem Theorems elementary submodels model completeness and applications to algebra This chapter also continues the foundational issues begun in the set theory chapter Mathematics can now be viewed as formal proofs from ZFC Also model theory leads to models of set theory This includes a discussion of absoluteness and an analysis of models such as H and R The Recursion Theory chapter develops some basic facts about computable functions and uses them to prove a number of results of foundational importance in particular Church's theorem on the undecidability of logical consequence the incompleteness theorems of Godel and Tarski's theorem on the non definability of truth
