Steffe, 2012-12-06 On the 26th 27th and 28th of February of 1988 a conference was held on the epistemological foundations of mathematical experience as part of the activities of NSF Grant No MDR 8550463 Child Generated Multiplying and Dividing Algorithms A Teaching Experiment I had just completed work on the book Construction of Arithmetical Meanings and Strategies with Paul Cobb and Ernst von Glasersfeld and felt that substantial progress had been made in understanding the early numerical experiences of the six children who were the subjects of study in that book While the book was in preparation I was also engaged in the teaching experiment on multiplying and dividing algorithms My focus in this teaching experiment was on investigating the mathematical experiences of the involved children and on developing a language through which those experiences might be expressed However prior to immersing myself in the conceptual analysis of the mathematical experiences of the children I felt that it was crucial to critically evaluate the progress that we felt we had made in our earlier work It was toward achieving this goal that I organized the conference When trying to understand the mathematical experiences of a child one can do no better than to interact with the child in a

mathematical context guided by the intention to specify the child's current knowledge and the progress the child might make

The Mathematical Experience Philip J. Davis, 1987 *Mathematical Knowledge in Teaching* Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are

important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently. The issues to be examined in *Mathematical Knowledge in Teaching* are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing, assessing and developing mathematical knowledge for teaching.

Introduction to Mathematical Structures and Proofs Larry J. Gerstein, 1996-04-04. This acclaimed book aids the transition from lower division calculus to upper division courses in linear and abstract algebra, real and complex analysis, number theory, topology and more, with examples, images, exercises and a solution manual for instructors.

Theories of Mathematical Learning Leslie P. Steffe, Pearla Nesher, Paul Cobb, Bharath Sriraman, Brian Greer, 2013-04-03. Chemists working with only mortars and pestles could not get very far unless they had mathematical models to explain what was happening inside of their elements of experience: an example of what could be termed mathematical learning. This volume contains the proceedings of Work Group 4, Theories of Mathematics, a subgroup of the Seventh International Congress on Mathematical Education held at Universit Laval in Quebec. Bringing together multiple perspectives on mathematical thinking, this volume presents elaborations on principles reflecting the progress made in the field over the past 20 years and represents starting points for understanding mathematical learning today. This volume will be of importance to educational researchers, math educators, graduate students of mathematical learning and anyone interested in the enterprise of improving mathematical learning worldwide.

Mathematics and Mind Alexander George, 1994. Those inquiring into the nature of mind have long been interested in the foundations of mathematics and conversely this branch of knowledge is distinctive in that our access to it is purely through thought. A better understanding of mathematical thought should clarify the conceptual foundations of mathematics and a deeper grasp of the latter should in turn illuminate the powers of mind through which mathematics is made available to us. The link between conceptions of mind and of mathematics has been a central theme running through the great competing philosophies of mathematics of the twentieth century though each has refashioned the connection and its import in distinctive ways. The present collection will be of interest to students of both mathematics and of mind. Contents include: Introduction by Alexander George; What is Mathematics About by Michael Dummett; The Advantages of Honest Toil over Theft by George Boolos; The Law of Excluded Middle and the Axiom of Choice by W. W. Tait; Mechanical Procedures and Mathematical Experience by Wilfried Sieg; Mathematical Intuition and Objectivity by Daniel Isaacson; Intuition and Number by Charles Parsons; and Hilbert's Axiomatic Method and the Laws of Thought by Michael Hallett.

Jean Piaget Richard Kohler, 2014-10-23. Jean Piaget was one of the great thinkers of the twentieth century. His influence on developmental psychology, education and epistemology has been enormous. This text undertakes a reconstruction of the contexts and intellectual development of Piaget's numerous texts in the wide ranging fields of biology, philosophy, psychoanalysis, child

psychology social psychology theology logic epistemology and education Richard Kohler reconstructs the often overlooked theological basis of Piaget's theories and analyses the influence this had upon the various areas of his research and reflections particularly in relation to education A Study of Mathematical Education Including the Teaching of Arithmetic Benchara Branford, 1924

Where is the Mathematics in Your Math Education Research? Xiaoheng Kitty Yan, Ami Mamolo, Igor' Kontorovich, 2025-06-25 This book brings together leading researchers in mathematics education to share personal narratives of key mathematical moments or ideas that inspired surprised or helped direct their research While the fruits of research activities and products are shared at scholarly conference and journals the footprints of mathematics that ignited the research processes is often behind the scenes and only acknowledged informally To make mathematics an essential component and a determining driving force of mathematics education research more visible chapters in this book highlight the indispensable and indisputable role of mathematics in mathematics education research The book is unique and timely in addressing the essential but increasingly side lined role of mathematics that permeates mathematics education research journals graduate programs and the personae of the next generation in the profession It renounces the shift away from mathematics and attempts to restore the place and value of mathematics by presenting elegant intriguing and substantial contributions to mathematics education that have come from keeping mathematics at the core of research pursuits Each chapter shares a journey in mathematics education research that was inspired by an affinity for mathematics and that helped shaped the field as we know it Each author shares insights and reflections on the status of mathematics in the mathematics education community how it has changed and what further changes might be expected This edited volume is of major interest to the mathematics education community including mathematics educators teacher educators researchers professional development providers and graduate students

After Gödel Richard Tieszen, 2011-05-05 Richard Tieszen presents an analysis development and defense of a number of central ideas in Kurt Gödel's writings on the philosophy and foundations of mathematics and logic Tieszen structures the argument around Gödel's three philosophical heroes Plato Leibniz and Husserl and his engagement with Kant and supplements close readings of Gödel's texts on foundations with materials from Gödel's Nachlass and from Hao Wang's discussions with Gödel As well as providing discussions of Gödel's views on the philosophical significance of his technical results on completeness incompleteness undecidability consistency proofs speed up theorems and independence proofs Tieszen furnishes a detailed analysis of Gödel's critique of Hilbert and Carnap and of his subsequent turn to Husserl's transcendental philosophy in 1959 On this basis a new type of platonic rationalism that requires rational intuition called constituted platonism is developed and defended Tieszen shows how constituted platonism addresses the problem of the objectivity of mathematics and of the knowledge of abstract mathematical objects Finally he considers the implications of this position for the claim that human minds monads are machines and discusses the issues of pragmatic holism and rationalism

The Making of the Economy Till Düppe, 2011-11-16 How did modern man

come to believe in the object of the economy What hopes made us accept scientific authority about this illusive thing What kinds of persons were attracted by objective knowledge in economic discourse And how does this knowledge guide our economic life The Making of the Economy tackles such questions surrounding the modern notion of the economy with a fresh look from phenomenological philosophy In a historical narrative of economic discourses Till D ppe shows that only due to the scientific culture of economics we speak of an economy Economic science made the economy Our economic experiences alone do not trigger an interest in the economy which makes Husserl s case for the forgetfulness of the life world D ppe s historical narrative focuses on the emergence of formal economic analysis out of a series of successive life worlds or concrete historical situations an approach which generates a new substantive understanding of both the history of economics and the current discourse of crisis surrounding economics The book will appeal to historians and philosophers of the social sciences as well as scholars of history philosophy and economics
