Mathematical Programming with MINOS Glenn Fox, Ontario Agricultural College. Dept. of Agricultural Economics and Business, 1986 **Journal of Agricultural Economics Research**, *Cost and Optimization in Government* Aman

Khan,2022-03-30 The careful management of costs and operations are two of the most essential elements for successful operation of any organization public private or nonprofit This book demonstrates that a good grounding in cost basics especially those related to cost accounting operations management and quality control can help all organizations in particular government increase efficiency improve performance and in the end do a better job of running its everyday operation The book is divided into three parts Part I offers thorough coverage of cost fundamentals with an emphasis on basic cost concepts cost behavior cost analysis cost assignment cost allocation and cost control Part II deals with optimization in government Included in this part are traditional or classical optimization with applications in inventory management and queuing followed by mathematical programming network analysis productivity measurement and games and decisions Finally Part III deals with a special case in cost and optimization that has become important in recent years quality control Simple accessible language and explanations are integrated throughout and examples have been drawn from government so that readers can easily relate to them Cost and Optimization is required reading for practicing public managers and students of public administration in need of a clear concise guide to efficient use of public resources

Linear Programming and Economic Analysis Robert Dorfman,Paul A. Samuelson,Robert M. Solow,2012-10-10 Designed primarily for economists and those interested in management economics who are not necessarily accomplished mathematicians this text offers a clear concise exposition of the relationship of linear programming to standard economic analysis The research and writing were supported by The RAND Corporation in the late 1950s Linear programming has been one of the most important postwar developments in economic theory but until publication of the present volume no text offered a comprehensive treatment of the many facets of the relationship of linear programming to traditional economic theory This book was the first to provide a wide ranging survey of such important aspects of the topic as the interrelations between the celebrated von Neumann theory of games and linear programming and the relationship between game theory and the traditional economic theories of duopoly and bilateral monopoly Modern economists will especially appreciate the treatment of the connection between linear programming and modern welfare economics and the insights that linear programming gives into the determinateness of Walrasian equilibrium The book also offers an excellent introduction to the important Leontief theory of input output as well as extensive treatment of the problems of dynamic linear programming Successfully used for three decades in graduate economics courses this book stresses practical problems and specifies important concrete applications

Generalized Convexity and Fractional Programming with Economic Applications Alberto Cambini,Erio Castagnoli,Laura Martein,Piera Mazzoleni,Siegfried Schaible,2012-12-06 Generalizations of convex functions have been used in a variety of fields such as economics business administration engineering statistics and applied sciences In 1949 de Finetti introduced one of the fundamental of generalized convex functions characterized by convex level sets which are now known as quasiconvex functions Since then numerous types of generalized convex functions have been

defined in accordance with the need of particular applications In each case such functions preserve some of the valuable properties of a convex function In addition to generalized convex functions this volume deals with fractional programs These are constrained optimization problems which in the objective function involve one or several ratios Such functions are often generalized convex Fractional programs arise in management science economics and numerical mathematics for example In order to promote the circulation and development of research in this field an international workshop on Generalized Concavity Fractional Programming and Economic Applications was held at the University of Pisa Italy May 30 June 1 1988 Following conferences on similar topics in Vancouver Canada in 1980 and in Canton USA in 1986 it was the first such conference organized in Europe It brought together 70 scientists from 11 countries Organizers were Professor A Cambini University of Pisa Professor E Castagnoli Bocconi University Milano Professor L Martein University of Pisa Professor P Mazzoleni University of Verona and Professor S Schaible University of California Riverside
