Windows on Mathematical Meanings Richard Noss, Celia Hoyles, 2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other [Volume 1: Research Syntheses](#)

M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM's Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field

Selected Regular Lectures from the 12th International Congress on Mathematical Education

Sung Je Cho, 2015-07-16 This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul Korea from July 8th to 15th 2012 ICME 12 brought together 4700 experts from 100 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice These selected Regular Lectures present the work of fifty one prominent mathematics educators from all over the globe The Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education *Intelligent Learning Environments: The Case of Geometry* Jean-Marie Laborde, 2012-12-06 This book is a thoroughly revised result updated to mid 1995 of the NATO Advanced Research Workshop on Intelligent Learning Environments the case of geometry held in Grenoble France November 13 16 1989 The main aim of the workshop was to foster exchanges among researchers who were concerned with the design of intelligent learning environments for geometry The problem of student modelling was chosen as a central theme of the workshop insofar as geometry cannot be reduced to procedural knowledge and because the significance of its complexity makes it of interest for intelligent tutoring system ITS development The workshop centred around the following themes modelling the knowledge domain modelling student knowledge design ing didactic interaction and learner control This book contains revised versions of the papers presented at the workshop All of the chapters that follow have been written by participants at the workshop Each formed the basis for a scheduled presentation and discussion Many are suggestive of research directions that will be carried out in the future There are four main issues running through the papers presented in this book knowledge about geometry is not knowledge about the real world and materialization of geometrical objects implies a reification of geometry which is amplified in the case of its implementation in a computer since objects can be manipulated directly and relations are the results of actions Laborde Schumann This aspect is well exemplified by research projects focusing on the design of geometric microworlds Guin Laborde *Resources in Education* ,1995 **Cases on Inquiry through Instructional Technology in Math and Science** Lennex, Lesia, Nettleton, Kimberly Fletcher, 2012-01-31 There exists a wealth of information about inquiry and about science technology engineering and mathematics STEM but current research lacks meaningfully written thoughtful applications of both topics Cases on Inquiry through Instructional Technology in Math and Science represents the work of many authors toward meaningful discourse of inquiry used in STEM teaching This book presents insightful information to teachers and teacher education candidates about using inquiry in the real classroom case studies from which research suggests appropriate uses and tangible direction for creating their own inquiry based STEM activities Sections take the reader logically through the meaning of inquiry in STEM teaching how to use technology in modern classrooms STEM projects which successfully integrate inquiry methodology and inquiry problem solving within

STEM classrooms with the aim of creating activities and models useful for real world classrooms Cognitive Models and Intelligent Environments for Learning Programming Enrica Lemut, Benedict DuBoulay, Giuliana Dettori, 2013-11-11 At present there is a general consensus on the nature of learning programming but there are different opinions on what forms an effective environment for it It is generally recognized that the development of a mental model is a formidable task for the student and that learning programming is a complex activity that depends heavily on metacognitive skills This book based on a NATO workshop presents both pure cognitive models and experimental learning environments and discusses what characteristics can make a learning model effective especially in relation to the learning environment natural or computerized The papers cover cognitive models related to different aspects of programming classes of learners and types of environment and are organized in three groups theoretical and empirical studies on understanding programming environments for learning programming and learning programming in school environments Comprehension design construction testing debugging and verification are recognized as interdependent skills which require complicated analysis and may develop independently and in different orders in novices This book shows that there is unlikely to be a single path from novice to expert and that the structure of the final product the program may not constrain the process by which it comes into being as much as some would advocate Research in Education ,1972 **Social Psychology Matters** Hollway, Wendy, Lucey, Helen, Phoenix, Ann, 2006-12-01 Social Psychology Matters explores the significance of social psychology in the twenty first century and the important contribution it can and does make to understanding ourselves and others in today's world This book is designed to help the reader navigate the complex and ever changing nature of the discipline and gain an overview of the key concepts methods and theories The authors adopt a broad approach to trace the roots and legacies of social psychology with a keen eye to the future Each chapter provides an in depth look at a social psychological topic of significance ranging from self and conflict to families and embodiment Four theoretical perspectives cognitive social discursive psychological phenomenological and social psychoanalytic enable students to critically analyse social psychological research These perspectives are interpreted through the interrogative themes of Individual society dualism Agency structure dualism Situated knowledges Power relations This stimulating and accessible text uses real life experience to demonstrate why social psychology matters and how our understanding of these topics can be continually enhanced and constructively applied **Eight Habits of Highly Effective Math Students (and the Teachers Who Teach Them)** Sue Chapman, Holly Burwell, Mary Mitchell, 2025-03-20 Essential habits to build mathematical confidence and competence for all students It has been said that teachers make approximately 1 500 decisions a day Given the volume of work it is no wonder that these decisions are frequently made reflex like and in the moment By intentionally nurturing effective habits in students as well as in teachers we can make these decisions more deliberately and in so doing foster a positive relationship with mathematics that will set students on an unstoppable trajectory of math learning Eight Habits of

Highly Effective Math Students and the Teachers Who Teach Them focuses on developing eight essential habits that support mathematical competence and confidence in students. This resource is designed as a personalized practice based professional learning experience leading you through a wealth of professional learning and application activities to support you in growing a specific math habit in your classroom to strengthen your students math learning and build your own efficacy. The book offers the chance to choose your own adventure through three teacher inquiry options focused on a specific math habit: Give it a Go, An Informal Exploration of a Teaching Action and Its Impact on Student Learning, Classroom Inquiry, A Classroom Based Teacher Inquiry Project, Focus on Equity, A Teacher Inquiry to Notice and Disrupt Patterns of Inequity. This book provides an actionable framework for improving math teaching and learning by emphasizing a commitment to equity because all students are capable of learning high level mathematics when provided with access to high quality instruction. Helping teachers develop mindsets and habits to consciously reflect on their instructional practice to continually strengthen teaching effectiveness and student learning outcomes. Curating short readings and practice based professional learning activities that can be engaged in individually or collaboratively. Highlighting the importance of celebrating growth and the role of teachers in nurturing good habits in their students. Offering a guide to coaching the habit through a process called Notice, Nurture, Name, and Nudge. Eight Habits of Highly Effective Math Students and the Teachers Who Teach Them is grounded in the unwavering belief that all students are math capable and all teachers can effectively teach mathematics. The book can be used individually by elementary school teachers and education leaders at school and district levels or in collaborative professional learning settings. It is an excellent companion to Holly Burwell and Sue Chapman's book Power Up Your Math Community. Corwin, 2024.

Computers and Exploratory Learning Andrea A. DiSessa, Celia Hoyles, Richard Noss, 2012-12-06. Computers are playing a fundamental role in enhancing exploratory learning techniques in education. This volume in the NATO Special Programme on Advanced Educational Technology covers the state of the art in the design and use of computer systems for exploratory learning. Contributed chapters treat principles, theory, practice, and examples of some of the best contemporary computer based learning environments: Logo, Boxer, Microworlds, Cabri G om tre, Star Logo, Table Top Geomland, spreadsheets, Function Machines, and others. Emphasis is on mathematics and science education. Synthetic chapters provide an overview of the current scene in computers and exploratory learning and analyses from the perspectives of epistemology, learning, and socio cultural studies.

Maths and ICT in the Primary School Richard English, 2013-05-24. By clearly outlining how ICT can enhance and improve children's learning, this book shows how to unleash the full potential of ICT within the classroom. Stimulating, useful, and free of jargon, the book provides many practical examples to show teachers where, when, and how ICT can be used effectively within their maths teaching. It provides advice on teaching creatively, choosing ICT resources, differentiation, assessing ICT, making the most of adult support. Rooted in the practical realities of the classroom, this book will support both trainee and qualified teachers in providing rich and creative maths

Diagnostic Teacher Mildred Z. Solomon, 1999 This provocative new volume from one of the nation's leading educational think tanks presents in depth portraits of teachers professional development staff and researchers working together to deepen teacher's professional capacities and students learning experiences Ranging across subject areas and grade levels The Diagnostic Teacher describes a variety of powerful classroom and school based strategies that help students achieve and teachers thrive The final two chapters define a set of underlying features shared in common by these diverse examples The result is a rich and inspiring blueprint for how school leaders can revitalize the profession of teaching while developing more inquiry oriented constructivist classrooms Heinemann Maths Plus Year 5 ICT Numeracy Link D Cobden, 2001-12

Advanced Educational Technologies for Mathematics and Science David L. Ferguson, 2013-04-17 This book is the outgrowth of a NATO Advanced Research Workshop held in Milton Keynes United Kingdom in the summer of 1990 The workshop brought together about 30 world leaders in the use of advanced technologies in the teaching of mathematics and science Many of these participants commented that the workshop was one of the more productive and exciting workshops that they had attended It was not uncommon to see participants engaged in informal discussion far into the evenings and early mornings long after formal sessions had ended It is my hope that this book captures the substance and excitement of many of the ideas that were presented at the workshop Indeed the process by which this book has come about has given every opportunity for the best thinking to get reflected here Participants wrote papers prior to the workshop After the workshop participants revised the papers at least once In a few instances three versions of papers were written Some participants could not resist the urge to incorporate descriptions of some of the newer developments in their projects The papers in this book demonstrate how technology is impacting our view of what should be taught what can be taught and how we should go about teaching in the various disciplines As such they offer great insight into the central issues of teaching and learning in a wide range of disciplines and across many grade levels ranging from elementary school through undergraduate college education
