Presenting Children to Maths: Stronger Character for Better Learning David Shattock, 2023-09-22

Mathematics is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid *Presenting Children to Maths* is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it

Fundamental Constructs in Mathematics Education Sue

Johnston-Wilder, John Mason, 2004-01-22 *Fundamental Constructs in Mathematics Education* is a unique sourcebook which has been crafted from a collection of classic tasks extracts and texts that have been quoted repeatedly in mathematics education literature. Linked together by the editors narrative the book provides a fascinating examination of key constructs in mathematics education. The book is divided into two parts. The first part examines thinking about the learner and includes the following constructs: constructivism, activity theory and didactics. Beginning with a chapter dedicated to the classic tasks used by researchers to probe learners understanding, readers are encouraged to try these theories themselves with learners and be knowledgeable when they encounter them in other writing. The second part focuses on thinking and teaching and includes issues of getting started, keeping going and bringing to a conclusion. Bringing together writing from Balacheff, Brousseau, Bruner, Cobb, Comfrey, Freudenthal, Greeno, Marton, Piaget, Schon, Vygotsky and many others, this unique examination of constructs in mathematics education will be a valuable resource for anyone reading literature related to learning mathematics, be they a teacher, adviser or a student on a masters or PhD course.

The Brilliance of Black Children in Mathematics Jacqueline Leonard, Danny B. Martin, 2013-03-01 This book is a critically important contribution to the work underway to transform schooling for students who have historically been denied access to a quality education, specifically African American children. The first section of the book provides some historical perspective critical to understanding the current state of education in the U S, specifically for the education of African American children. The following sections include chapters on policy, learning, ethnomathematics, student identity and teacher preparation as it relates to the mathematical education of Black children. Through offering counternarratives about mathematically successful Black youth, advocating for a curriculum that is grounded in African American culture and ways of thinking, providing shining examples of the brilliance of Black students and promoting high expectations for all, rather than situating students as the problem, the authors of this book provide powerful insights related to the teaching and learning of mathematics for African American students. As is made evident in this book, effective teaching involves much more than just engaging students in inquiry based pedagogy. Kitchen, 2003 The chapters offered in this book demonstrate how mathematics instruction for African American students needs to take into account historical marginalization and present day policies that do harm to Black students. Kunjufu, 2005 Empowering mathematics instruction for African American students needs to take into consideration and promote students cultural, spiritual and historical identities. Furthermore, mathematics instruction for African American students should create opportunities for students to express themselves and the needs of their communities as a means to promote social justice both within their classrooms and communities.
