Mathematics For Chemists:

Maths for Chemists Martin Cockett, Graham Doggett, 2012 The two volumes of Maths for Chemists provide an excellent resource for all undergraduate chemistry students but are particularly focussed on the needs of students who may not have studied mathematics beyond GCSE level or equivalent The texts are introductory in nature and adopt a sympathetic approach for students who need support and understanding in working with the diverse mathematical tools required in a typical chemistry degree course The early chapters of Maths for Chemists Volume I Numbers Functions and Calculus provide a succinct introduction to the important mathematical skills of algebraic manipulation trigonometry numbers functions units and the general grammar of maths Later chapters build on these basic mathematical principles as a foundation for the development of differential and integral calculus In spite of the introductory nature of this volume some of the more important mathematical tools required in quantum chemistry are deliberately included through a gradual introduction to and development of the concept of the eigenvalue problem Ideal for the needs of undergraduate chemistry students Tutorial Chemistry Texts is a major series consisting of short single topic or modular texts concentrating on the fundamental areas of chemistry taught in undergraduate science courses Each book provides a concise account of the basic principles underlying a given subject embodying an independent learning philosophy and including worked examples Basic Mathematics for Chemists Peter Tebbutt, 1998-07 This text provides a gentle introduction to the maths chemists need to know Fully worked examples are contained within each chapter with answers given at the end of the book Maths for Chemists: Numbers, functions and calculus Martin Cockett, Graham Doggett, 2003 An excellent resource for students who need support and understanding in working with the diverse mathematical tools required in a typical chemistry degree course *Essential Mathematics for Chemists* John Gormally, 2000 Assuming little knowledge of mathematics this text first introduces basic skills in handling numbers before covering key topics relevant to chemistry including functions elementary algebraic manipulation differential and integral calculus and matrix algebra *Mathematics for Chemistry* Graham Doggett, Brian T. Sutcliffe, 1995 Guide to mathematical theory and practice for undergraduate chemists *Mathematics for Chemists* P. G. Francis, 2012-12-06 This text is concerned with those aspects of mathematics that are necessary for first degree students of chemistry It is written from the point of view that an element of mathematical rigour is essential for a proper appreciation of the scope and limitations of mathematical methods and that the connection between physical principles and their mathematical formulation requires at least as much study as the mathematical principles themselves It is written with chemistry students particularly in mind because that subject provides a point of view that differs in some respects from that of students of other scientific disciplines Chemists in particular need insight into three dimensional geometry and an appreciation of problems involving many variables It is also a subject that draws particular benefit from having available two rigorous disciplines those of mathematics and of thermodynamics The benefit of rigour is that it provides a degree of

certainty which is valuable in a subject of such complexity as is provided by the behaviour of real chemical systems As an experimental science we attempt in chemistry to understand and to predict behaviour by combining precise experimental measurement with such rigorous theory as may be at the time available these seldom provide a complete picture but do enable areas of uncertainty to be identified
