Dochy, 2012-12-06 Achievement assessment has undergone a major shift from what some call a culture of testing to a culture of assessment Nowadays a strong emphasis is placed on the integration of assessment and instruction on assessing processes rather than just products and on evaluating individual progress relative to each student s starting point This book addresses assessment issues in light of the present state of affairs The first part discusses new alternatives in the assessment of achievement in various subject areas focusing on agenda practice impact and evaluation of the assessment The second part deals with issues related to assessment of the learning process specifically questions concerning the assessment of individual differences in prior knowledge learning skills and strategies **Supplementary Material and Solutions Manual for Mathematical Modeling in the Environment** Charles R. Hadlock, 2020-05-05 This manual is meant to provide supplementary material and solutions to the exercises used in Charles Hadlock s textbook *Mathematical Modeling in the Environment* The manual is invaluable to users of the textbook as it contains complete solutions and often further discussion of essentially every exercise the author presents in his book This includes both the mathematical computational exercises as well as the research questions and investigations Since the exercises in the textbook are very rich in content rather than simple mechanical problems and cover a wide range most readers will not have the time to work out every one on their own Readers can thus still benefit greatly from perusing solutions to problems they have at least thought about briefly Students

using this manual still need to work out solutions to research questions using their own sources and adapting them to their own geographic locations or to numerical problems using their own computational schemes so this manual will be a useful guide to students in many course contexts Enrichment material is included on the topics of some of the exercises Advice for teachers who lack previous environmental experience but who want to teach this material is also provided and makes it practical for such persons to offer a course based on these volumes This book is the essential companion to Mathematical Modeling in the Environment

Values and Valuing in Mathematics Education Yüksel Dede, Gosia Marschall, Philip Clarkson, 2024-02-22 This book is a follow up to *Values and Valuing in Mathematics Education: Scanning and Scoping the Territory* (2019, Springer). This book adds a critical emphasis on practice and fosters thinking concerning positive mathematical well-being, engagement, teacher noticing, and values alignment among a range of critical notions that intersect with values and valuing. Values and valuing play a key role in many aspects of education such as assessment, planning, classroom interactions, choosing tasks, and general well-being. What one values and finds important in the learning and teaching of mathematics operates within the intersection of all social, cognitive, and affective aspects of school pedagogy, making values a significant holistic factor in education. The chapters explore potential teaching strategies that enhance the understanding of the central place of values in mathematics itself as a subject as well as how values impact how mathematics is used within society. This book includes examples of strategies for facilitating students' meaningful engagement with and conscious learning of values when engaging in mathematical thinking and doing.
