

Mathematics In The Modern World

Module #1

Topic: THE NATURE OF MATHEMATICS

MATHEMATICS is:

- the study of pattern and structure.
- a useful way to think about nature and our world.
- a tool to quantify, organize and control our world, predict phenomena and make life easier for us.

MATHEMATICS is

- in many patterns and occurrences that exists in nature, in our world, and in our life. Mathematics gives sense to these patterns and occurrences.

ROLES THAT MATHEMATICS PLAY IN OUR WORLD

A. Mathematics helps organize patterns and regularities in our world like:

1. Patterns can be observed even in stars which move in circles across the sky each day.
2. The weather season cycle each year. All snowflakes contains sixfold symmetry which no two are exactly the same.

3. Patterns can be seen in fish patterns like spotted trunkfish, spotted puffer, blue spotted stingray, spotted moray eel, coral grouper, redlion fish, yellow boxfish and angel fish. These animals and fish stripes and spots attest to mathematical regularities in biological growth and form.

4. Zebras, tigers, cats and snakes are covered in patterns of stripes; leopards and hyenas are covered in pattern of spots and giraffes are covered in pattern of blotches.

Mathematics The World Of Science:

Mathematics and the Real World Zvi Artstein, 2014-09-02 In this accessible and illuminating study of how the science of mathematics developed a veteran math researcher and educator looks at the ways in which our evolutionary makeup is both a help and a hindrance to the study of math Artstein chronicles the discovery of important mathematical connections between mathematics and the real world from ancient times to the present The author then describes some of the contemporary applications of mathematics in probability theory in the study of human behavior and in combination with computers which give mathematics unprecedented power The author concludes with an insightful discussion of why mathematics for most people is so frustrating He argues that the rigorous logical structure of math goes against the grain of our predisposed ways of thinking as shaped by evolution presumably because the talent needed to cope with logical mathematics gave the human race as a whole no evolutionary advantage With this in mind he offers ways to overcome these innate impediments in the teaching of math

How Numbers Work New Scientist, 2018-05-01 Discover the incredible connection between numbers and reality itself Think of a number between one and ten No hang on let's make this interesting Between zero and infinity Even if you stick to the whole numbers there are a lot to choose from an infinite number in fact Throw in decimal fractions and infinity suddenly gets an awful lot bigger is that even possible And then there are the negative numbers the imaginary numbers the irrational numbers like pi which never end It literally never ends The world of numbers is indeed strange and beautiful Among its inhabitants are some really notable characters pi e the square root of minus two and the famous golden ratio to name just a few Prime numbers occupy a special status Zero is very odd indeed And even some apparently common or garden integers such as 37 have special properties *How Numbers Work* takes a tour of this mind blowing but beautiful world of numbers and the mathematical rules that connect them Find out mathematicians favourite numbers and the ones they are afraid of spoiler it isn't 13 Take a crash course in the biggest unsolved problems that keep mathematicians up at night And learn some amazing mathematical tricks that will keep you amused for hours

Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends **STEM Education Across the Learning**
