Grid Generation and Adaptive Algorithms Marshall W. Bern,Joseph E. Flaherty,Mitchell Luskin,2012-12-06 This IMA Volume in Mathematics and its Applications GRID GENERATION AND ADAPTIVE ALGORITHMS is based on the proceedings of a workshop with the same title The work shop was an integral part of the 1996 97 IMA program on MATHEMAT ICS IN HIGH PERFORMANCE COMPUTING I would like to thank Marshall Bern Xerox Palo Alto Research Cen ter Joseph E Flaherty Department of Computer Science Rensselaer Polytechnic Institute and Mitchell Luskin School of Mathematics Uni versity of Minnesota for their excellent work as organizers of the meeting and for editing the proceedings I also take this opportunity to

thank the National Science Founda tion NSF Department of Energy DOE and the Army Research Office ARO whose financial support made the workshop possible Willard Miller Jr Professor and Director v PREFACE Scientific and engineering computation has become so complex that traditional numerical computation on uniform meshes is generally not pos sible or too expensive Mesh generation must reflect both the domain geometry and the expected solution characteristics Meshes should fur thermore be related to the solution through computable estimates of dis cretization errors This suggests an automatic and adaptive process where an initial mesh is enriched with the goal of computing a solution with prescribed accuracy specifications in an optimal manner While automatic mesh generation procedures and adaptive strategies are becoming available major computational challenges remain Three dimensional mesh genera tion is still far from automatic
