### **Computer-Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools**

Costabile, Francesco Aldo, Altomare, Mariavittoria, Tricoli, Gianluca, 2020-08-07 The theme of inserting new digital technologies into the teaching and learning of mathematics from primary and secondary schools has provoked a wide and interesting debate One such debate is the reformation of the foundations of mathematics to include computation what and how to calculate among the traditional themes Arithmetic Geometry etc of mathematics Thus the authors propose the MatCos Project as a new approach for solving this issue *Computer Based Mathematics Education and the Use of MatCos Software in Primary and Secondary Schools* is a critical reference source that proposes a new pedagogical learning paradigm that guides students in the formation of an active logical sequential intuitive and creative thinking that directs them towards problem solving and starts students with computational thinking and programming in a natural way The content of the book is divided into two parts with the first exploring theoretical and pedagogical notes on mathematics and the second examining the MatCos programming environment and its systematic inclusion in teaching practice Highlighting themes that include computer assisted instruction teaching learning sequences and programming this book is ideal for in service teachers mathematics instructors academicians researchers and students     *Handbook on the History of Mathematics Education*

Alexander Karp, Gert Schubring, 2014-01-25 This is the first comprehensive *International Handbook on the History of Mathematics Education* covering a wide spectrum of epochs and civilizations countries and cultures Until now much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars not least because it has been written in the language and for readers of an individual country And yet a historical overview however brief has become an indispensable element of nearly every dissertation and scholarly article This handbook provides for the first time a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education not only in their own countries but globally as well Although written primarily for mathematics educators this handbook will also be of interest to researchers of the history of education in

general as well as specialists in cultural and even social history      Mathematics for Electricity and Electronics Arthur D. Kramer,2006 This book provides a thorough understanding of essential algebra and trigonometry for electricity and electronic technology      *Teaching Math, Science, and Technology in Schools Today* Dennis Adams,Mary Hamm,2014-02-19 Teaching Math Science and Technology in Schools Today Guidelines for Engaging Both Eager and Reluctant Learners offers unique engaging and thought provoking ideas The activities open imaginative doors to learning and provide opportunities for all learners It surveys today s most important trends and dilemmas while explaining how collaboration and critical thinking can be translated into fresh classroom practices Questions engagement and curiosity are viewed as natural partners for mathematical problem solving scientific inquiry and learning about technology Like the Common Core State Standards the book builds on the social nature of learning to provide suggestions for both eager and reluctant learners The overall goal of the book is to deepen the collective conversation challenge thinking and provide some up to date tools for teachers so they can help reverse the steady erosion of math science and technology understanding in the general population      **Resources in Education** ,1999      **Computers in Education** ,1983      **Computers in Education: Report of a research conference** ,1983      Mathematical Modelling in Education Research and Practice Gloria Ann Stillman,Werner Blum,Maria Salett Biembengut,2015-07-20 In this volume cultural social and cognitive influences on the research and teaching of mathematical modelling are explored from a variety of theoretical and practical perspectives The authors of the current volume are all members of the International Community of Teachers of Mathematical Modelling and Applications the peak research body in this field A distinctive feature of this volume is the high number of authors from South American countries These authors bring quite a different perspective to modelling than has been showcased in previous books in this series in particular from a cultural point of view As well as recent international research there is a strong emphasis on pedagogical issues including those associated with technology and assessment in the teaching and learning of modelling Applications at various levels of education are exemplified The contributions reflect common issues shared globally and represent emergent or on going challenges      **Translations on Communist China** ,1969-10
