Karl R. Popper,John C. Eccles,2012-12-06 The problem of the relation between our bodies and our minds and espe cially of the link between brain structures and processes on the one hand and mental dispositions and events on the other is an exceedingly difficult one Without pretending to be able to foresee future developments both authors of this book think it improbable that the problem will ever be solved in the sense that we shall really understand this relation We think that no more can be expected than to make a little progress here or there We have written this book in the hope that we have been able to do so We are conscious of the fact that what we have done is very conjectur al and very modest We are aware of our fallibility yet we believe in the intrinsic value of every human effort to deepen our understanding of our selves and of the world we live in We believe in humanism in human rationality in human science and in other human achievements however fallible they are We are unimpressed by the recurrent intellectual fashions that belittle science and the other great human achievements An additional motive for writing this book is that we both feel that the debunking of man has gone far enough even too far It is said that we had to learn from Copernicus and Darwin that man s place in the universe is not so exalted or so exclusive as man once thought That may well be
