**The Mating Mind** Geoffrey Miller, 2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience a book that offers the most convincing and radical explanation for how and why the human mind evolved Consciousness morality creativity language and art these are the traits that make us human Scientists have traditionally explained these qualities as merely a side effect of surplus brain size but Miller argues that they were sexual attractors not side effects He bases his argument on Darwin's theory of sexual selection which until now has played second fiddle to Darwin's theory of natural selection and draws on ideas and research from a wide range of fields including psychology economics history and pop culture Witty powerfully argued and continually thought provoking *The Mating Mind* is a landmark in our understanding of our own species

**Evolutionary and Neurocognitive Approaches to Aesthetics, Creativity and the Arts** Colin Martindale, Paul Locher, Vladimir M Petrov, Arnold Berleant, 2019-06-04 In this book well known scholars describe new and exciting approaches to aesthetics creativity and psychology of the arts approaching these topics from a point of view that is biological or related to biology and answering new questions with new methods and theories All known societies produce and enjoy arts such as literature music and visual decoration or depiction Judging from prehistoric archaeological evidence this arose very early in human development Furthermore Darwin was explicit in attributing aesthetic sensitivity to lower animals These considerations lead us to wonder whether the arts might not be evolutionarily based Although such an evolutionary basis is not obvious on the face of it the idea has recently elicited considerable attention The book begins with a consideration of ten theories on the evolutionary function of specific arts such as music and literature The theory of evolution was first drawn up in biology but evolution is not confined to biology genuinely evolutionary theories of sociocultural change can be formulated That they need to be formulated is shown in several chapters that discuss regular trends in literature and scientific writings Psychologists have recently rediscovered the obvious fact that thought and perception occur in the brain so cognitive science moves ever closer to neuroscience Several chapters give overviews of neurocognitive and neural network approaches to creativity and aesthetic appreciation The book concludes with two exciting describing brain scan research on what happens in the brain during creativity and presenting a close examination of the relationship between genetically transmitted mental disorder and creativity *Not So Weird After All* Rosemary L. Hopcroft, Martin Fieder, Susanne Huber, 2024-03-26 This is the first book to fully examine from an evolutionary point of view the association of social status and fertility in human societies before during and after the demographic transition In most nonhuman social species social status or relative rank in a social group is positively associated with the number of offspring with high status individuals typically having more offspring than low status individuals However humans appear to be different As societies have gotten richer fertility has dipped to unprecedented lows with some developed societies now at or below replacement fertility Within rich societies women in higher income families often have fewer children than women in lower income families Evolutionary theory suggests that the relationship between social status and fertility is likely to be somewhat different for men and women so it is important to examine this relationship for men and women separately When this is done the positive association between individual social status and fertility is often clear in less developed pre transitional societies particularly for men Once the demographic transition begins it is elite families particularly the women of elite families who lead the way in fertility decline Post

transition the evidence from a variety of developed societies in Europe North America and East Asia is that high status men particularly men with high personal income do have more children on average than lower status men The reverse is often true of women although there is evidence that this is changing in Nordic countries The implications of these observations for evolutionary theory are also discussed This book will be of interest to students and researchers in the social sciences with an interest in evolutionary sociology evolutionary anthropology evolutionary psychology demography and fertility

Evolutionary Psychology in the Business Sciences Gad Saad, 2011-07-09 All individuals who operate in the business sphere whether as consumers employers employees entrepreneurs or financial traders to name a few constituents share a common biological heritage and are defined by a universal human nature As such it is surprising that so few business scholars have incorporated biological and evolutionary informed theories within their conceptual toolboxes This edited book addresses this lacuna by culling chapters at the intersection of the evolutionary behavioral sciences and specific business contexts including in marketing consumer behavior advertising innovation and creativity intertemporal choice negotiations competition and cooperation in organizational settings sex differences in workplace patterns executive leadership business ethics store design behavioral decision making and electronic communication To reword the famous aphorism of T G Dobzhansky nothing in business makes sense except in the light of evolution

*Family Relationships* Catherine A. Salmon, Todd K. Shackelford, 2008 Kinship ties the close relationships found within the family have been a central focus of evolutionary biological analyses of social behavior ever since biologist William Hamilton extended the concept of Darwinian fitness to include an individual's actions benefiting not only his own offspring but also collateral kin Evolutionary biologists consider organisms not only reproductive strategists but also nepotistic strategists If a person's genes are just as likely to be reproduced in her sister as in her daughter then we should expect the evolution of sororal investment in the same way as one expects maternal investment This concept has revolutionized biologists' understanding of social interaction and developmental psychologists' understanding of the family However kinship ties have largely been ignored in other areas of psychology particularly social psychology Family Relationships brings together leading theorists and researchers from evolutionary psychology and related disciplines to illustrate the ways in which an evolutionary perspective can inform our study and understanding of family relationships The contributors argue that family psychology is relationship specific the relationship between mother and daughter is different from that between father and daughter or that between brother and sister or sister and sister In other words humans have evolved specialized mechanisms for processing information and motivating behavior that deal with the distinct demands of being a mate father mother sibling child or grandparent Such an evolutionary perspective on family dynamics provides a unique insight into human behavior This volume will be an indispensable resource for psychologists sociologists and anthropologists as well scholars of family marriage and animal behavior

*Creating Consilience* Edward Slingerland, Mark

Collard, 2012-01-19 Calls for a consilient or vertically integrated approach to the study of human mind and culture have for the most part been received by scholars in the humanities with either indifference or hostility One reason for this is that consilience has often been framed as bringing the study of humanistic issues into line with the study of non human phenomena rather than as something to which humanists and scientists contribute equally The other major reason that consilience has yet to catch on in the humanities is a dearth of compelling examples of the benefits of adopting a consilient approach Creating Consilience is the product of a workshop that brought together internationally renowned scholars from a variety of fields to address both of these issues It includes representative pieces from workshop speakers and participants that examine how adopting such a consilient stance informed by cognitive science and grounded in evolutionary theory would concretely impact specific topics in the humanities examining each topic in a manner that not only cuts across the humanities natural science divide but also across individual humanistic disciplines By taking seriously the fact that science humanities integration is a two way exchange this volume takes a new approach to bridging the cultures of science and the humanities The editors and contributors formulate how to develop a new shared framework of consilience beyond mere interdisciplinarity in a way that both sides can accept
