Distributed Programming Rachid Guerraoui,Luís Rodrigues,2006-05-01 In modern computing a program is usually
distributed among several processes The fundamental challenge when developing reliable distributed programs is to support
the cooperation of processes required to execute a common task even when some of these processes fail Guerraoui and
Rodrigues present an introductory description of fundamental reliable distributed programming abstractions as well as
algorithms to implement these abstractions The authors follow an incremental approach by first introducing basic
abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging
environments Each core chapter is devoted to one specific class of abstractions covering reliable delivery shared memory
consensus and various forms of agreement This textbook comes with a companion set of running examples implemented in
Java These can be used by students to get a better understanding of how reliable distributed programming abstractions can
be implemented and used in practice Combined the chapters deliver a full course on reliable distributed programming The
book can also be used as a complete reference on the basic elements required to build reliable distributed applications
