Berger,1998-09-20 CHARGING AHEAD foretells the world s next great energy transformation the shift to clean renewable energy sources John J Berger provides a fascinating look at new industries that will make such change possible and the trillion dollar benefits Americans can enjoy by choosing pollution free energy and transportation 30 photos Green Saints for a Green Generation Osgood, Libby,2024-10-23 The Solar House Daniel D.

Chiras,2002-10-01 Passive solar heating and passive cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel Yet while heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Now Dan Chiras author of the popular book *The Natural House* brings those principles up to date for a new generation of solar enthusiasts The techniques required to heat and cool a building passively have been used for thousands of years Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes The Greeks considered anyone who didn't use passive solar to heat a home to be a barbarian In the United States passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes With grand enthusiasm but with scant knowledge and sometimes little common sense architects and builders created a wide variety of solar homes Some worked pretty well but looked more like laboratories than houses Others performed poorly overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting In *The Solar House* Dan Chiras sets the record straight on the vast potential for passive heating and cooling Acknowledging the good intentions of misguided solar designers in the past he highlights certain egregious and entirely avoidable errors More importantly Chiras explains in methodical detail how today's home builders can succeed with solar designs Now that energy efficiency measures including higher levels of insulation and multi layered glazing have become standard it is easier than ever before to create a comfortable and affordable passive solar house that will provide year round comfort in any climate Moreover since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems Chiras explains state of the art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting Chiras also explains the new diagnostic aids available in printed worksheet or software formats allowing readers to generate their own design schemes

*Governing the Atom* John Byrne,Steven M. Hoffman,2020-02-21 Promoted as a form of limitless low cost energy without the polluting effects of its fossil fuel counterparts nuclear power has enjoyed unparalleled support in several countries Despite the development of an extensive set of policy and institutional mechanisms to foster its use nuclear technology has been troubled by a wide range of problems and continues to pose risks many believe are far greater than society should accept The legacy of failure ranges from catastrophic accidents like that at Chernobyl to the declaration of bankruptcy by the Washington Public Power Supply System *Governing the Atom* explores why support for the technology remains substantial The first part of this volume examines the social institutions that have accompanied the development of nuclear power The second part details the numerous accommodations which have been required of society beginning with the technology's impact on communities and geographic regions particularly affected by mining and milling The technology's inherent tendency towards normal accidents and the conflict between expert and public opinion on the dangers involved is

examined as are the on going problems of waste disposal and decommissioning The volume concludes with an examination of nuclear power developments in France Germany Russia and the Commonwealth of Independent States Eastern Europe Korea and Japan The volume provides a needed vehicle for the timely consultation and dissemination of current research on important energy policy issues Governing the Atom provides insightful commentary regarding the initiation and development of nuclear technology It will be of interest to policymakers energy and environmental experts sociologists and historians of technology and all those interested in the problem of democracy in a technological society

The Integrated Protestant Ethic and the Spirit of Environmentalism S. Steiner-Aeschliman,1999 The theory and data of environmental science suggest that growth in rates of population consumption and environmental degradation as a result of the activities of industrialized societies has created an ecological crisis to which modern societies must adapt However adaptation is problematic Max Weber studied adaptive social change during the industrial revolution The evolution of this new way of life was initially problematic because individuals who established industrialism were socialized under feudalism In this dissertation I consider The Protestant Ethic and the Spirit of Capitalism as a theoretical treatise framed by modern human ecology in order to study social change in the context of the ecological crisis of industrialism The Protestant Ethic is known for describing how religious ideas influenced the unfolding of modern capitalism in the West However there is nothing inherent in Protestantism that requires linkage to industrialism I argue that Protestantism has evolved and that it need not necessarily promote environmental exploitation although under industrialism it has I identify a green subculture within Protestantism and consider how Protestantism s weakness may also be its strength The very sociological structure that in the absence of ecologically realistic norms permits widespread ecosystem degradation by industrial capitalism may also generate ecologically realistic norms for a natural capitalism Weber contended that rationality was problematic because it paradoxically results in a dual crisis of management and meaning where human agency becomes imprisoned as if in an iron cage The irrational continuation of environmentally degrading social practices eventually contributes to a legitimation crisis People turn to religion as an alternative authority If science and religion converge on environmental values they might catalyze social change unless they are too distorted by ideological bias Adaptive social change only occurs if ethical and ecological values are in accordance with the sustainability of ecosystems Hence to adapt to the ecological crisis sociocultural systems require socialization into ecological realism because ecologically rational societies may still be maladaptively organized around environmentally unsustainable trajectories
