Report Of The Committee On The Ethics Of Genetic Modification And Food Use:

Report of the Committee on the Ethics of Genetic Modification and Food Use Great Britain. Committee on the Ethics of Genetic Modification and Food Use, Great Britain. Ministry of Agriculture, Fisheries and Food, 1993 There are ethical issues beyond those simply of safety which might arise from the marketing and consumption of food derived from genetic modification programmes In particular ethical concerns relating to food use include the transfer of human genes to food animals the transfer of genes from animals whose flesh is forbidden for use as food by certain religious groups the transfer of animal genes into food crops which may be of particular concern to some vegetarians the use of organisms containing human genes as animal feed The views of a wide variety of organizations were sought to consider these issues This is the Committee's concise report which includes their final recommendations

Genetic Modification in the Food Industry Susan Harlander, Sibel Roller, 2012-12-06 Although the true economic impact of genetic modifications is yet to be realized the potential of this new technology to benefit the food processing industry and to improve food quality is enormous Specific genetically modified whole foods and food ingredients that have recently become available or are about to become available are described and discussed in relation to their technical performance and consumer acceptance The regulatory ethical and communication issues in food biotechnology are also reviewed As the products of gene technology come on stream decisions need to be made as to whether or not to use them Yet many food industry professionals have little or no background in biotechnology and have a limited concept of possible applications in foods Therefore this book aims to foster a greater understanding of the benefits and potential pitfalls of this new technology

An Ecological and Societal Approach to Biological Control J. Eilenberg, Heikki M. T. Hokkanen, 2007-01-29 Biological control is among the most promising methods for control of pests diseases and weeds and this book treats ecological and societal aspects together for the first time The aim is to evaluate the significance of certain biological properties like biodiversity and natural habitats In a societal approach terms like consumer's attitude risk perception learning and education and value triangle are recognized as significant for biological production and human welfare

Food, Science and Society P.S. Belton, Teresa Belton, 2013-06-29 There is widespread concern amongst consumers about the safety and acceptability of food and there are clearly communication gaps between consumers many food professionals and food industry This book offers accounts of the two way nature of this difficult communication process and steps that can be made to bridge these communication gaps in a variety of social and cultural environments Individual chapters of the book analyze the roles of science culture and risk perception and of mass media and attitudes towards eating An additional section describes the interface between scientists and lay people with regard to policy making and agricultural practice

Genetically Modified Crops Keith T. Atherton, 2002-09-12 Biotechnology has a significant impact on both medicine and agriculture With the introduction of new products to the marketplace the safety of those products is of paramount importance New safety evaluation strategies are now employed to

ensure that the consumer is adequately protected This book describes those strategies and addresses some of **Biotechnology, Patents and Morality** Sigrid Sterckx,2017-11-01 This title was first published in 2000 This work documents an international and interdisciplinary workshop on the ethical aspects of the patenting of biotechnological inventions including genes plants and animals The public perception is discussed along with how these perceptions relate to ethical social and cultural factors The legal framework in Europe is laid out by several experts in the field of patent law and the situation in the US is also briefly described This edition also includes a general discussion of three important theories called upon to justify the patent system the natural rights argument the distributive justice argument and the utilitarian argument The chapter about the European Directive on the legal protection of biotechnological inventions has been updated A selection of provisions from the August 1997 draft as well as the final text of the Directive as adopted on 12 May 1998 are discussed and commented upon The patent provisions of the TRIPs Agreement the Agreement on Trade Related aspects of Intellectual Property rights concluded in 1994 as an Annex to the Agreement Establishing the World Trade Organization are also discussed and criticized paying particular attention to the implications for biotechnology patents Finally the question is asked whether the developing countries stand to gain anything from TRIPs A look at the results of empirical research conducted by commentators on the economics of patenting reveals that the new patent regime may prove to entail significant costs for the developing countries This second edition also contains material on the EU Directive on biotechnology patents adopted in May 1998 justificatory theories of the patent system and the TRIPs agreement on Trade Related aspects of Intellectual Property rights concluded in the GATT WTO framework **Understanding Consumers of Food Products** Lynn Frewer,Hans Van Trijp,2006-12-22 In order for food businesses scientists and policy makers to develop successful products services and policies it is essential that they understand food consumers and how they decide which products to buy Food consumer behaviour is the result of various factors including the motivations of different consumers the attributes of specific foods and the environment in which food choices occur Recognising diversity between individual consumers different stages of life and different cultural contexts is increasingly important as markets become increasingly diverse and international The book begins with a comprehensive introduction and analysis of the key drivers of consumer food choices such as the environment and sensory product features Part two examines the role of consumers attitudes towards quality and marketing and their views on food preparation and technology Part three covers cultural and individual differences in food choice as well as addressing potentially influential factors such as age and gender Important topics such as public health and methods to change consumers preferences for unhealthy foods are discussed in part four The final section concludes with advice on developing coherent safety policies and the consumers responsibility for food production and consumption Understanding consumers of food products is a standard reference for all those in the food industry concerned with product development and regulation Develop an understanding of buyer behaviour to assist developing successful products

Recognise the diversity between consumers and learn how to cater for their needs Covers cultural and individual differences in food choice [Chimera's Children](#) David Albert Jones,2012-11-02 A comprehensive survey of the current context and ethical implications of human nonhuman genetic combinations The idea of human nonhuman combinations has been a recurrent theme throughout the history of humanity From the myths of the Minotaur and the centaurs in ancient Greece to the dogheads of the Middle Ages right through to the monsters of modern science fiction these beings have always been a source of fascination In recent years however biomedical advances have demonstrated the potential to make these entities a reality through the creation of inter species combinations As a result pressing and perplexing ethical questions arise Introducing the reader to the historical context of human nonhuman experimentation and potential future developments this volume offers clarification analysis and a thorough overview of the ethical challenges relating to human nonhuman chimeras true hybrids cybrids and other combinations This book is the first accessible survey of the different ethical dilemmas facing contemporary society in the creation of human nonhuman embryonic foetal and postnatal entities These include important cultural legal philosophical and religious perspectives As such it will act as a springboard for future debate **Acceptable Genes?**

Conrad Brunk,Harold Coward,2009-10-30 Perspectives on genetically modified foods from world religions and indigenous traditions [Reordering Nature](#) Celia Deane-Drummond,Bronislaw Szerszynski,Robin Grove-White,2003-02-01 In this book experts in the environment theology and science argue that the challenge posed to society by biotechnology lies not only in terms of risk benefit analysis of individual genetic technologies and interventions but also has implications for the way we think about human identity and our relationship to the natural world Such a profound they would suggest religious challenge requires a response that is genuinely interdisciplinary in nature a conversation that draws as much on expertise in theology and philosophy as on the natural sciences and risk assessment techniques They argue that an adequate response must also be sociologically informed in at least two ways First it must draw on contemporary sociological insights about contemporary cultural change the complex role of expert knowledge in modern complex society and the specific social dynamics of contemporary technological risks Secondly it must endeavour to pay sensitive attention to the voice of the lay public in the current controversy over the new genetics This book attempts to realise such an aim as a contribution not just to academic scholarship but also to the public debate about biotechnology and its regulation Thus the collection includes contributions from scholars in a range of intellectual domains indeed many of the chapters themselves draw on more than one discipline in new and challenging ways The book invites the reader to enter into this conversation in a creative way and come to appreciate more fully the many sided nature of the debate **Engineering Genesis** Donald Bruce,Ann Bruce,2014-01-27 Few issues have aroused so much public attention and controversy as recent developments in biotechnology How can we make sound judgements of the cloning of Dolly the sheep genetically altered foodstuffs or the prospect of transplanting pigs hearts into humans Are we playing God with nature What is driving these developments and

how can they be made more accountable to the public Engineering Genesis provides a uniquely informed balanced and varied insight into these and many other key issues from a working group of distinguished experts in genetics agriculture animal welfare ethics theology sociology and risk brought together by the Society Religion and Technology Project of the Church of Scotland A number of case studies present all the main innovations animal cloning pharmaceutical production from animals cross species transplants and genetically modified foods From these the authors develop a careful analysis of the ethical and social implications offering contrasting perspectives and insightful arguments which above all will enable readers to form their own judgements on these vital questions **Food Safety Handbook** Ronald H. Schmidt,Gary E. Rodrick,2003-03-10 As with the beginning of the twentieth century when food safety standards and the therapeutic benefits of certain foods and supplements first caught the public's attention the dawn of the twenty first century finds a great social priority placed on the science of food safety Ronald Schmidt and Gary Rodrick's Food Safety Handbook provides a single comprehensive reference on all major food safety issues This expansive volume covers current United States and international regulatory information food safety in biotechnology myriad food hazards food safety surveillance and risk prevention Approaching food safety from retail commercial and institutional angles this authoritative resource analyzes every step of the food production process from processing and packaging to handling and distribution The Handbook categorizes and defines real and perceived safety issues surrounding food providing scientifically non biased perspectives on issues for professional and general readers Each part is divided into chapters which are then organized into the following structure Introduction and Definition of Issues Background and Historical Significance Scientific Basis and Implications Regulatory Industrial and International Implications and Current and Future Implications Topics covered include Risk assessment and epidemiology Biological chemical and physical hazards Control systems and intervention strategies for reducing risk or preventing food hazards such as Hazard Analysis Critical Control Point HACCP Diet health and safety issues with emphasis on food fortification dietary supplements and functional foods Worldwide food safety issues including European Union perspectives on genetic modification Food and beverage processors manufacturers transporters and government regulators will find the Food Safety Handbook to be the premier reference in its field **Herbicide-Resistant Crops** Stephen O. Duke,2018-01-18 Edited by a recognized leader in the field Herbicide Resistant Crops is the first book to cover all of the issues related to the controversial topic of herbicide resistant crops It provides extensive discussions of the modern biotechnological methods that have been used to develop such crops and reviews the implications both positive and negative of developing crops that are resistant to herbicides The creation and anticipated applications of specific herbicide resistant crops are also discussed In addition the book covers the potential impact of herbicide resistant crops on weed management practices and the environment and presents issues related to the regulation and economics of these crops The editor has brought together a diverse group of professionals representing the several distinct areas impacted by the new technology of

herbicide resistant crops The wide range of viewpoints presented in this book creates a balanced and complete survey providing a notable contribution to the literature **Food Ethics** Ben Mepham,2012-10-02 None of us can avoid being interested in food Our very existence depends on the supply of safe nutritious foods It is then hardly surprising that food has become the focus of a wide range of ethical concerns Is the food we buy safe Is it produced by means which respect the welfare of animals and sustain the land Are modern biotechnologies employed in food production immoral This book addresses such issues by applying ethical principles to many areas of current concern The contributors provide original and thought provoking treatments of a number of highly topical issues from global hunger and its ethical implications to the cultural habits affecting consumption This interdisciplinary study will prove to be essential reading for all those concerned with food as professionals students or consumers **Social Sciences for Knowledge and Decision Making**
