Perspectives on Content-Based Multimedia Systems Jian Kang Wu,Mohan S. Kankanhalli,Joo-Hwee Lim,Dezhong Hong,2006-04-11 Multimedia data comprising of images audio and video is becoming increasingly common The decreasing costs of consumer electronic devices such as digital cameras and digital camcorders along with the ease of transportation facilitated by the Internet has lead to a phenomenal rise in the amount of multimedia data generated and distributed Given that this trend of increased use of multimedia data is likely to accelerate there is an urgent need for providing a clear means of capturing storing indexing retrieving analyzing and summarizing such data Content based access to multimedia data is of primary importance since it is the natural way by which human beings interact with such information To facilitate the content based access of multimedia information the first step is to derive feature measures from these data so that a feature space representation of the data content can be formed This can subsequently allow for mapping the feature space to the symbol space semantics either automatically or through human intervention Thus signal to symbol mapping useful for any practical system can be successfully achieved Perspectives on Content Based Multimedia Systems provides a comprehensive set of techniques to tackle these important issues This book offers detailed solutions to a wide range of practical problems in building real systems by providing specifics of three systems built by the authors While providing a systems focus it also equips the reader with a keen understanding of the fundamental issues including a formalism for content based multimedia database systems multimedia feature extraction object based techniques signature based techniques and fuzzy retrieval techniques The performance evaluation issues of practical systems is also explained This book brings together essential elements of building a content based multimedia database system in a way that makes them accessible to practitioners in computer science and electrical engineering It can also serve as a textbook for graduate level courses

Vasilakos, MingChu Li, Kouichi Sakurai, 2009-11-24 As future generation information technology FGIT becomes specialized and fragmented it is easy to lose sight that many topics in FGIT have common threads and because of this advances in one discipline may be transmitted to others Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts Through such hybrid philosophy a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions It included the following international conferences Advanced Software Engineering and Its Applications ASEA Bio Science and Bio Technology BSBT Control and Automation CA Database Theory and Application DTA Disaster Recovery and Business Continuity DRBC published independently Future Generation Communication and Networking FGCN that was combined with Advanced Communication and Networking ACN Grid and Distributed Computing GDC Multimedia Computer Graphics and Broadcasting MulGraB Security Technology SecTech Signal Processing Image Processing and Pattern Recognition SIP and e Service Science and Technology UNESST      *Semantic Computing* Phillip C.-Y. **Advances in Visual Information Management** Hiroshi Arisawa,Tiziana Catarci,2013-03-20 Video segmentation is the most fundamental process for appropriate index ing and retrieval of video intervals In general video streams are composed 1 of shots delimited by physical shot boundaries Substantial work has been done on how to detect such shot boundaries automatically Arman et al 1993 Zhang et al 1993 Zhang et al 1995 Kobla et al 1997 Through the inte gration of technologies such as image processing speech character recognition and natural language understanding keywords can be extracted and associated with these shots for indexing Wactlar et al 1996 A single shot however rarely carries enough amount of information to be meaningful by

itself. Usually it is a semantically meaningful interval that most users are interested in retrieving. Generally such meaningful intervals span several consecutive shots. There hardly exists any efficient and reliable technique either automatic or manual to identify all semantically meaningful intervals within a video stream. Works by Smith and Davenport 1992, Oomoto and Tanaka 1993, Weiss et al 1995, Hjelsovold et al 1996 suggest manually defining all such intervals in the database in advance. However, even an hour long video may have an indefinite number of meaningful intervals. Moreover, video data is multi-interpretative. Therefore, given a query, what is a meaningful interval to an annotator may not be meaningful to the user who issues the query. In practice, manual indexing of meaningful intervals is labour intensive and inadequate.

**Video Search and Mining** Dan Schonfeld, Caifeng Shan, Dacheng Tao, Liang Wang, 2010-04-20. As cameras become more pervasive in our daily life, vast amounts of video data are generated. The popularity of YouTube and similar websites such as Tudou and Youku provides strong evidence for the increasing role of video in society. One of the main challenges confronting us in the era of information technology is to effectively rely on the huge and rapidly growing video data accumulating in large multimedia archives. Innovative video processing and analysis techniques will play an increasingly important role in resolving the difficult task of video search and retrieval. A wide range of video-based applications have benefited from advances in video search and mining, including multimedia information management, human-computer interaction, security and surveillance, copyright protection and personal entertainment, to name a few. This book provides an overview of emerging new approaches to video search and mining based on promising methods being developed in the computer vision and image analysis community. Video search and mining is a rapidly evolving discipline whose aim is to capture interesting patterns in video data. It has become one of the core areas in the data mining research community. In comparison to other types of data mining, e.g. text video mining is still in its infancy. Many challenging research problems are facing video mining researchers.
