

IMMUNE SYSTEM IN REPRODUCTIVE FUNCTION

Reproductive Immunology

Christopher Chang

Reproductive Immunology:

Reproductive Immunology Gil Mor, 2021-02-12 Reproductive Immunology Basic Concepts gives a holistic insight into the understanding of the complex interactions between the maternal immune system and the fetal placental unit necessary for the success of pregnancy. This interaction is critical for the support of the human fetal semiallograft and the protection against infections. The book covers various topics such as B cells, macrophages, T cells, discussion on fetal signals and their impact on maternal reproductive cells such as endometrial cells, mast cells, and the role of fetal Hofbauer cells, the immune regulatory role of glucocorticoids, and many other novel topics within the field of reproductive immunology. Edited and written by experts in the field, this book introduces the up-to-date knowledge of the role of the immune system during pregnancy and provides the necessary background to understand pregnancy complications associated with alterations in the functioning of the immune system. The book provides a complete discussion on the immunological aspects of pregnancy and serves as a great tool for research scientists, students, reproductive immunologists, and OBGYNs. Shows the detailed evaluation of the knowledge related to each immune cell type in the pregnant and not pregnant uterus. Evaluates each immune cell type and its function during specific reproductive events. Provides the biological background for understanding the clinical aspects that will be discussed in subsequent volumes in the series. Immunology of Animal Reproduction Y. Hari Babu, 2013-09-14

The book is intended for the students involved in the study of microbiology, immunology, and animal reproduction as an introduction to more extensive studies. An overview of immunology is provided in the book to refer immediately any basic information needed for further understanding of the subject dealt in this book. The chapters covered may provide the structural component for the basic understanding of the reproductive immunology in animals. It is designed to complement but not to compete with the few books available with regard to reproduction. The book is profusely illustrated with figures and tables. The concise nature of the book and the simple and clear treatment of the topics it is hopefully will prove to be useful to all. **Immunology of Animal Reproduction** Blake Wilson, 2018-10-30

The book is expected to include in the investigation of microbiology, immunology, and creature generation as a prologue to more broad examinations. An outline of immunology is given in the book to allude instantly any fundamental data required for additionally comprehension of the subject managed in this book. The book is secured may give the basic part to the fundamental comprehension of the conceptive immunology in creatures. It is intended to supplement yet not to contend with the few books accessible as to multiplication. Immunological Aspects of Reproduction in creatures contains abundance of data on the field of conceptive immunology and show exactly how complex this field is and what number of inquiries still stay to be replied. Inoculation of a few animal groups with either the hypothalamic hormone LH, RH, pituitary gonadotrophins, or ovarian steroids and concentrates guided towards endeavors to improve creature generation by either dynamic or inactive vaccination of female ranch creatures against steroid hormones. Crafting Immunity Jennifer Keelan, 2017-03-02 Immunity is as old as illness

itself yet historians have only just begun to take up the challenge of reconstructing the modern transformation of attempts to protect against disease. *Crafting Immunity* assembles in one volume the most recent efforts of an international group of scholars to place the diverse practices of immunity in their historical contexts. It is this diversity that provides the book with its greatest source of strength. Collectively the papers in this volume suggest that it was the craft like small scale and local conditions of clinical medicine that turned the immunity of individuals and populations into biomedical objects. That is to say the modern conception of immunity was at least as much the product of the work of healing as it was the systematic result of discoveries about the immune system. Working outside the narrow confines of laboratory histories *Crafting Immunity* is the first attempt to set the problems of immunity into a variety of social technological institutional and intellectual contexts. It will appeal not only to historians and sociologists of health but also to social and cultural historians interested in the biomedical creation of modern health regimens.

Immunological Aspects of Reproduction in Mammals D. B. Crichton, 2014-05-20
Immunological Aspects of Reproduction in Mammals contains papers presented during a symposium at the University of Nottingham Easter School. The scholarly presentations provide a wealth of information on the field of reproductive immunology and indicate just how complex this field is and how many questions still remain to be answered. The book begins with reviews of the current status of the complexities and uncertainties of the cellular basis of the immune response and the structure and function of antibodies. This is followed by separate chapters on the assessment and interpretation of the phenomena surrounding autoimmune and isoimmune reactions to spermatozoa, advances in defining the distribution and degree of exposure of major histocompatibility antigens, the reproductive immunology of the mouse, horse and sheep and fetal and neonatal immunity. Subsequent chapters present studies of immunization of several species with either the hypothalamic hormone LH-RH, pituitary gonadotrophins or ovarian steroids and studies directed towards efforts to enhance animal production by either active or passive immunization of female farm animals against steroid hormones. This book will be a valuable reference text for those already involved in the field and a stimulus for others to enter this complex and fascinating area of research.

This book systematically reviews and discusses recent studies and articles on the immunology of female genital tract tissue. The scope is broad encompassing innate immune responses, adaptive humoral and cell mediated immunity, the immunology of menstruation, the immunology of viral and bacterial infections, the immunology of normal and abnormal pregnancy and immunological infertility. Throughout tables and illustrations are judiciously used to facilitate understanding. *Immunology of the Female Genital Tract* will serve as an invaluable source of up to date information for all with an interest in this subject.

Integrating Evolutionary Biology into

Medical Education Jay Schulkin,Michael Power,2019-12-19 Clinicians and scientists are increasingly recognising the importance of an evolutionary perspective in studying the aetiology prevention and treatment of human disease the growing

prominence of genetics in medicine is further adding to the interest in evolutionary medicine. In spite of this too few medical students or residents study evolution. This book builds a compelling case for integrating evolutionary biology into undergraduate and postgraduate medical education as well as its intrinsic value to medicine. Chapter by chapter the authors, experts in anthropology, biology, ecology, physiology, public health, and various disciplines of medicine, present the rationale for clinically relevant evolutionary thinking. They achieve this within the broader context of medicine but through the focused lens of maternal and child health, with an emphasis on female reproduction and the early life biochemical, immunological, and microbial responses influenced by evolution. The tightly woven and accessible narrative illustrates how a medical education that considers evolved traits can deepen our understanding of the complexities of the human body, variability in health, susceptibility to disease, and ultimately help guide treatment, prevention, and public health policy. However, integrating evolutionary biology into medical education continues to face several roadblocks. The medical curriculum is already replete with complex subjects and a long period of training. The addition of an evolutionary perspective to this curriculum would certainly seem daunting, and many medical educators express concern over potential controversy if evolution is introduced into the curriculum of their schools. Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training. In summary, this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking. It will be of relevance and use to evolutionary biologists, physicians, medical students, and biomedical research scientists.
