Reproductive Patterns:

Patterns of Reproduction of Four Species of Vespertilionid Bats in Paraguay Philip Myers, 1977 **Plant Reproductive Ecology : Patterns and Strategies** Jon and Lesley Lovett-Doust Professor of Biology the University of Windsor, 1988-07-07 This collection of reviews by leading investigators examines plant reproduction and sexuality within a framework of evolutionary ecology providing an up to date account of the field The contributors discuss conceptual issues showing the importance of sex allocation sexual selection and inclusive fitness and the dimensions of paternity and maternity in plants The evolution maintenance and loss of self incompatibility in plants the nature of sex choice in plants and sex dimorphism are all explored in detail Specific forms of biotic interactions shaping the evolution of plant reproductive strategy are discussed and a taxonomically based review of the reproductive ecology of non angiosperm plant groups such as bryophytes ferns and algae is presented Together these studies focus on the complexities of plant life cycles and the distinctive reproductive biologies of these organisms while showing the similarities between nonflowering plants and the more thoroughly documented flowering species **Analysis of Changing Rural Women's Reproduction Behavior Patterns in South Africa** Zanele Mfono, Zn Mfono, 2008-12-31 This report presents a description of the patterns of change in rural women s reproductive behaviour in South Africa over a period of 17 years extending from 1987 9 to 2004 The analyses were informed by the Programme of Action that was set out at the 1994 International Cairo Conference on Population and Development The Programme of Action has a 20 year implementation time period and the year 2004 was halfway through the 20 years The year 2004 is also 30 years since the introduction of South Africa s National Family Planning Programme in 1975 which advanced the health rationale for fertility regulation It is also twenty years after the introduction of the Population Development Programme in 1985 which emphasized the demographic rationale for fertility regulation It is finally the seventh year after the introduction of the Choice on Termination of Pregnancy Act in 1997 which legalized pregnancy terminations under prescribed conditions with emphasis on women s rights to choice Five of South Africa s nine provinces which have more than 50 per cent of their populations living in tribal areas were included in the analyses **Asdell's Patterns of Mammalian Reproduction** Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993 Since the appearance of the second edition of Sydney A Asdell s widely used Patterns of Mammalian Reproduction in 1964 the field of reproductive physiology has expanded dramatically Accordingly this revision adopts a different structure from previous editions substituting empirical delineations for physiological interpretations With the emphases now on a presentation of the published facts of mammalian reproduction it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species To gather information the authors examined more than 20 000 publications dating up to 1992 They used primary sources as much as possible supplementing them with English translations of Russian Finnish Chinese and Japanese journals The data are presented in taxonomic order Each familial account summarizes the

pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology reproductive anatomy and reproductive physiology of the family Following each account is a tabular listing of species specific data for neonatal mass and size weaning mass and size litter size age at sexual maturity estrous cycle length gestation length lactation length number of litters per year and seasonality of reproduction For each of these reproductive variables the range of data gleaned from the literature is given together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book **Behavioral Endocrinology** Jill B. Becker, 2002 The second edition of a popular introduction to the field of behavioral endocrinology **Reproductive Behavior** Henry P. David, 2013-12-11 **Biology of Amphibians** William E. Duellman, Linda Trueb, 1994-02 Now reissued in paperback with an updated preface by the authors Biology of Amphibians remains the standard work in its field **Contraception and Reproduction** National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Population, 1989-02-01 This book examines how changes in reproductive patterns such as the number and timing of births and spacing between births have affected the health of women and children in the developing world It reviews the relationships between contraceptive use reproductive patterns and health the effects of differences and changes in reproductive patterns as well as the role of family planning in women's fertility and health The Reproductive Biology of the Chelonia Gerald Kuchling, 2012-12-06 This book presents a comparative view of chelonian reproduction and discusses ecophysiological implications for their captive breeding Chelonians with their protective rigid armour are a phylogenetically antique group of reptiles which radiated to occupy niches from the open waters of the oceans to rivers creeks swamps forests savannahs and deserts A few North American turtle species have been well studied but until recently reproductive data on other chelonian species have been scarce The way in which chelonians adjust their conservative mode of reproduction to the various requirements of their habitats and life styles is the theme of this book the physiology of reproduction and its interplay with ecological conditions are its central subjects

Reproductive Biology Martin Thiel, 2013 Rickey Cothran and Martin Thiel explore the reproductive biology of crustaceans from allocation strategies at the individual level to the ecology of mating systems **Animal Models of Reproductive Behavior** Raúl G. Paredes, Wendy Portillo, Marie Bedos, 2023-05-16 This volume presents the latest techniques to study several aspects of reproductive behavior in different species The chapters in this book cover topics such as methods to investigate social behavior sexual motivation and reward both of which are fundamental for the initiation of sexual behavior olfactory signaling different characteristics and models of reproductive function and parental behavior in both rats and rabbits In the Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory Cutting edge and practical Animal Models of Reproductive Behavior is a valuable
