

Reptiles

Reptiles are one group (or Class) of animals. They share some important traits.

- 1) Most reptiles lay eggs (*oviparous*), though some can give birth to live young.
- 2) Their eggs are laid on land in loose soil or sand.
- 3) Their eggs have a leathery shell to protect them from drying out.
- 4) Reptiles are covered with tough, dry skin and protective scales or plates.
- 5) Reptiles are cold-blooded. This means that their body temperature is regulated by the air temperature. If the air is not warm enough, they seek out direct sunlight. They spend the winter months (in colder climates) in a kind of hibernation called *torpor*, buried in mud or leaf litter. In very hot climates, they may also hibernate when it's too hot. This is called *estivation*.
- 5) Unlike mammals, reptile teeth are usually the same shape and size throughout their mouth.
- 6) Unlike mammals, reptiles can take care of themselves very soon after hatching. Some species of reptiles, like the American alligator will watch over newly hatched young for a time.
- 7) Some reptiles have a venomous bite.
- 8) The study of reptiles is called *herpetology*.
- 9) Reptiles are broken down into 4 groups (Orders) living today.
 - Crocodylia (crocodiles, caimans, alligators, gharials)
 - Testudines (turtles, terrapins, sliders, tortoises)
 - Squamata is broken down into 2 suborders: Lacertilia or Sauria (lizards) and Serpentes (snakes)
 - Sphenodontia (tuataras)

Blüm,2012-12-06 Oral birth in the Australian gastric brooding frog *Rheobatrachus sUus* 2 Preface I have deliberately chosen the title picture to the preface which shows the oral birth of a young gastric brooding frog *Rheobatrachus situs* to draw the reader's attention to the preface since I wish to explain why the book was written and illustrated in the way it now appears. The book has grown out of the material of a lecture course taking 3 to 4 hours per week each semester that I have given for several years at the Ruhr University Bochum as the theoretical basis for an intensive 4 week practical course on vertebrate reproduction for students of biology. For various reasons I am a hardened opponent of giving lecture notes to the students. On the other hand I found that my students made great efforts to work through and supplement their own lecture notes by studying the literature. However there are no suitable textbooks on vertebrate reproduction written in German and the standard work in this field is now several decades old and deals mainly with mammals. The students were therefore often frustrated in their efforts given the limited time they had available. I have therefore decided to present here the most important structural and functional aspects of vertebrate reproduction and include other material to extend the framework of my original lectures.
