Hofbauer, Flávia Piovesan, Amaya Úbeda de Torres, 2020-08-28 This comprehensive Research Handbook offers a comparative overview of the history nature and current status of social rights at the universal and regional level Tracing their evolution from rather

modest beginnings to becoming the category of rights responding most accurately to the 21st century's policy objectives of poverty eradication and equitable resource allocation this Research Handbook assesses the mechanisms used to enhance the implementation and enforcement of social rights Theorising Identity and Subjectivity in Educational Leadership Research Richard Niesche, Amanda Heffernan, 2020-03-11 Theorising Identity and Subjectivity in Educational Leadership Research brings together a range of international scholars to examine identity and subjectivities in educational leadership in new and original ways The chapters draw on a variety of approaches in theory and method to demonstrate the important new developments in understanding identity and subjectivity beyond the traditional ways of understanding and thinking about identity in the field of educational leadership The book highlights empirical theoretical and conceptual research that offers new ways of thinking about the work of educational leaders The authors take critical approaches to exploring the influences of gender race sexuality class power and discourse on the identity and subjectivity formation of educational leaders It provides global perspectives on educational leadership research and researchers and offer exciting new approaches to theorising and researching these issues This book will appeal to researchers students and professionals working in the fields of educational leadership and sociology and the chapters within offer readers new perspectives in understanding educational leaders their work and their identities *Research Handbook on Climate Governance* Karin Bäckstrand, Eva Löfbrand, 2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order In the post Copenhagen landscape the top down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors arenas and sites The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship **Life History Research** , 2009-01-01 Much has been written about lifehistory research in recent times It has been paraded as a counterculture to the traditional research canon and celebrated as a genre that promotes methodological pluralism However lifehistory researchers have an obligation to transcend spurious claims about the perceived merits of the methodology and extend the debates around how the genre simultaneously problematises and responds to the competing challenges of Epistemology Methodology and Representation In conceiving of each of the chapters from an epistemological perspective the authors focus on how their individual work has crossed or expanded traditional borders of epistemology and ontology of how the work has satisfied the rigours of thesis production and contributed to changing conceptions of knowledge what knowledge gets produced and how knowledge is produced when we make particular methodological choices Since any methodological orientation is invariably selective and the researcher is always involved and implicated in the production of data the authors focus on what selections they have made in their projects what governed these choices what benefits

deficits those choices yielded and what the implications of their research are for those meta narratives that have established the regimes of truth legitimacy and veracity in research Knowledge production is inextricably linked to representation In the process of articulating their findings each author made particular representational choices sometimes transgressing conventional approaches The book explores why these choices were made and how the choices influenced the kinds of knowledge generated The book provides theoretical justifications for these transgressions and reflect on how the experience of representation helped disrupt the authors essentialist notions of research production and for whom it is produced This book is not another celebration of lifehistory as a counterculture The book hopes to be a deeply critical contribution to disrupt notions around epistemological authority voice and power and how these are mediated by the delicate relations of the researcher and researched The problematises and complicates the assumptions that frame this genre with a view to highlighting the potential hazards of the method while demonstrating its potentiality in shaping our conceptions of Ethics Methodology and Representation

Health Systems Resilience Index: A Sub-National Analysis of India's COVID-19 Response Debosmita Sarkar, Soumya Bhowmick, Renita D'Souza, Oommen C. Kurian, 2022-07-22. India's COVID-19 battle will be told and retold in the coming years inspiring both praise for what the country has achieved and critique for its shortfalls. As India's story continues to unfold, two strands will mould the various assessments. First is India's aggregate performance as a developing economy. It marshalled its meagre resources to respond to the exponential threat of the virus and was determined too to be part of global solutions to this scourge such as the manufacture and supply of life-saving vaccines. The second and perhaps even more important story is on ground zero. In its cities and villages, India's success or failure would be a factor of the leadership and stewardship of Prime Minister Narendra Modi and his team in responding to the crisis and the commitment of the chief ministers and state functionaries to beef up their health systems and save lives. Whichever way the India story is told, there are certain truths that cannot be hidden. We need to invest more in our health systems and acknowledge the stellar role of our frontline workers and formal and informal health sector personnel as well as India's prowess in certain segments of the medical and health industry. In this context, it becomes interesting to see how in the country's federal structure, where health is a State subject, the sub-national units, i.e. states and union territories (UTs), have performed. The present work, Health Systems Resilience Index: A Sub-National Analysis of India's COVID-19 Response, provides answers to that question. It builds on an earlier report published by the Observer Research Foundation in May 2020. That report, State of the States: Two Months of the Pandemic, evaluated India's initial response to the pandemic shortly after the crisis was officially named by the World Health Organization (WHO). Two years since then, this report attempts a more ambitious goal to devise a unique Resilience Index for the health systems of India's states and UTs.
