retirement planning and the distribution of wealth The book links life cycle microeconomic behavior to important macroeconomic outcomes including the roughly 50 percent postwar decline in America's rate of saving and its increasing wealth inequality The book traces these outcomes to the government's five decade long policy of transferring in the form of annuities ever larger sums from young savers to old spenders The book presents new theoretical and empirical analyses of altruism that rule out the possibility that private intergenerational transfers have offset those by the government While rational life cycle behavior can explain broad economic outcomes the book also shows that a significant minority of households fail to make coherent life cycle saving and insurance decisions These mistakes are compounded by reliance on conventional financial planning tools which the book compares with Economic Security Planner ESPlanner a new life cycle financial planning software program The application of ESPlanner to U S data indicates that most Americans approaching retirement age are saving at much lower rates than they should be given potential major cuts in Social Security benefits
