Hans Albert Einstein (May 14, 1904 - July 26, 1973)

In the bute to Einstein's lifelong contributions to the field, his former graduate students published a book of research in his honor in 1972, Sedimentation: Symposium to Honor Professor H.A.

Einstein

In 1988, the American Society of Civil Engineers created the Hans

Ziegler, 1992 First Published in 1992 Routledge is an imprint of Taylor Francis an informa company Miscellaneous Publication , 1974 A Celebration of Statistics Anthony C. Atkinson, Stephen E. Fienberg, 2012-12-06 The International Statistical Institute was founded in 1885 and is therefore one of the world soldest international scientific societies. The field of statistics is still expanding rapidly and possesses a rich variety of applications in many areas of human activity such as science government business industry and everyday affairs. In consequence the celebration of the Institute's centenary in 1985 is of considerable interest not only to statisticians but also more widely to the international scientific community. As part of its centennial celebration planning the Institute decided to publish a volume of papers representing the immensely wide range of interests encompassed by statistics in its international context viewed both from a historical and from a contemporary standpoint. We were fortunate in securing the services of Anthony Atkinson and Stephen Fienberg as Editors of this volume they have worked hard over a period of

several years to put together a most fascinating collection of papers On behalf of the Institute it is my pleasant duty to thank them and the authors for their contributions J DURBIN President International Statistical Institute Preface The papers in this volume were prepared to help celebrate the centenary of the International Statistical Institute During the ISI s first 100 years statistics has matured both as a scientific discipline and as a profession in ways that the ISI s founders could not possibly have imagined **Proceedings of the Third Federal Inter-agency Sedimentation Conference, 1976**,1976

Water-Quality Hydrology V.P. Singh, Bhishm Kumar, 2012-12-06 Water is vital to life maintenance of ecological balance economic development and sustenance of civilization Planning and management of water resources and its optimal use are a matter of urgency for most countries of the world and even more so for India with a huge population Growing population and expanding economic activities exert increasing demands on water for varied needs domestic industrial agricultural power generation navigation recreation etc In India agriculture is the highest user of water The past three decades have witnessed numerous advances as well as have presented intriguing challenges and exciting opportunities in hydrology and water resources Compounding them has been the growing environmental consciousness Nowhere are these challenges more apparent than in India As we approach the twenty first century it is entirely fitting to take stock of what has been accomplished and what remains to be accomplished and what accomplishments are relevant with particular reference to **Distributed Hydrological Modelling** Michael B. Abbott, Jens Christian Refsgaard, 2012-12-06 It is the task of the engineer as of any other professional person to do everything that is reasonably possible to analyse the difficulties with which his or her client is confronted and on this basis to design solutions and implement these in practice The distributed hydrological model is correspondingly the means for doing everything that is reasonably possible of mobilising as much data and testing it with as much knowledge as is economically feasible for the purpose of analysing problems and of designing and implementing remedial measures in the case of difficulties arising within the hydrological cycle Thus the aim of distributed hydrologic modelling is to make the fullest use of cartographic data of geological data of satellite data of stream discharge measurements of borehole data of observations of crops and other vegetation of historical records of floods and droughts and indeed of everything else that has ever been recorded or remembered and then to apply to this everything that is known about meteorology plant physiology soil physics hydrogeology sediment transport and everything else that is relevant within this context Of course no matter how much data we have and no matter how much we know it will never be enough to treat some problems and some situations but still we can aim in this way to do the best that we possibly can

Stream Channel Stability Carlos V. Alonso, Neil L.

Coleman, 1981 The objective of this study is to develop a better understanding of the stochastic structure of the instantaneous boundary shear processes in open channel flows This report presents new measurements of some stochastic properties of boundary shear stress taken at points spaced over half the wetted perimeter of a smooth open channel under conditions of essentially constant aspect ratio and Reynolds number The instantaneous boundary shear stress was measured with hot film sensors driven by constant temperature anemometers The anemometer signals were digitized and analyzed in a high speed computer The effects of position along the wetted perimeter on the statistical moments and the probabilistic distribution of the instantaneous boundary shear stress are discussed Author Research Reporting Series ,1975
