Union as part of the Geophysical Monograph Series Volume 171 Groundwater is a critical resource and the Principal source of drinking water for over 1.5 billion people. In 2001 the National Research Council cited as a grand challenge our need to understand the processes that control water movement in the subsurface. This volume faces that challenge in terms of data integration between complex multi-scale hydrologic processes and their links to other physical, chemical, and biological processes at multiple scales. **Subsurface Hydrology Data Integration for Properties and Processes** presents the current state of the science in four aspects: Approaches to hydrologic data integration; Data integration for characterization of hydrologic properties; Data integration for understanding hydrologic processes; Meta-analysis of current interpretations. Scientists and researchers in the field, the laboratory, and the classroom will find this work an important resource in advancing our understanding of subsurface water movement.

Site Characterization in Karst and Pseudokarst Terraines Richard C. Benson, Lynn B. Yuhr, 2015-09-24 This book provides a practical strategy for obtaining a more complete and accurate geologic site characterization. The strategy and methods to characterize complex geologic settings are readily available. The strategy utilizes readily available technology, basic science, and good old-fashioned common sense, resulting in a solid understanding of geologic and even karst or pseudokarst conditions. We provide an introduction to many off-the-shelf methods available for site characterization as well as examples of their application throughout the book. The purpose of a geologic site characterization is to understand the 3-dimensional geologic framework along with the engineering and hydrologic properties of a site including any man-made impacts. A well-done site characterization is the cornerstone of all geotechnical groundwater and environmental projects. The geologic conditions, particularly karst conditions, can significantly impact a site including its structural stability, groundwater pathways, and potential for rapid transport or traps for contaminants. Once we have adequately characterized the geologic conditions, can we carry our remediation design and construction model flow and make risk assessments that are accurate and reliable.

Advances in Hydrogeology Phoolendra K. Mishra, Kristopher L. Kuhlman, 2013-04-16 This book represents different types of progress in hydrogeology including conceptualization changes, different approaches to simulating groundwater flow and transport, new hydrogeophysical methods. Each chapter extends or summarizes a recent development in hydrogeology with forward-looking statements regarding the challenges and strengths that are faced. While the title and scope is broad, there are several sub-themes that connect the chapters. Themes include theoretical advances in conceptualization and modeling of hydrogeologic problems. Conceptual advances are further tempered by insights arising from observations from both field and laboratory work.

Analysis and Design of Geotechnical Structures Manuel Matos Fernandes, 2020-08-27 Analysis and design of geotechnical structures combines in a single endeavor a textbook to assist students in understanding the behavior of the main geotechnical works and a guide for practising geotechnical engineers, designers, and consultants. The subjects are treated in

line with limit state design which underpins the Eurocodes and most North America design codes Instructors and students will value innovative approaches to numerous issues refined by the experience of the author in teaching generations of enthusiastic students Professionals will gain from its comprehensive treatment of the topics covered in each chapter supplemented by a plethora of informative material used by consultants and designers For the benefit of both academics and professionals conceptual exercises and practical geotechnical design problems are proposed at the end of most chapters A final annex includes detailed resolutions of the exercises and problems

Grand Challenges in Environmental Sciences

National Research Council, Oversight Commission for the Committee on Grand Challenges in Environmental Sciences, Committee on Grand Challenges in Environmental Sciences, 2001-05-24 Scientists have long sought to unravel the fundamental mysteries of the land life water and air that surround us But as the consequences of humanity's impact on the planet become increasingly evident governments are realizing the critical importance of understanding these environmental systems and investing billions of dollars in research to do so To identify high priority environmental science projects Grand Challenges in Environmental Sciences explores the most important areas of research for the next generation The book's goal is not to list the world's biggest environmental problems Rather it is to determine areas of opportunity that with a concerted investment could yield significant new findings Nominations for environmental science's grand challenges were solicited from thousands of scientists worldwide Based on their responses eight major areas of focus were identified areas that offer the potential for a major scientific breakthrough of practical importance to humankind and that are feasible if given major new funding The book further pinpoints four areas for immediate action and investment

Research Needs for High-Level Waste Stored in Tanks and Bins at U.S. Department of Energy Sites National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Long-Term Research Needs for Radioactive High-Level Waste at Department of Energy Sites, 2001-10-05 The United States Department of Energy DOE has approximately 400 million liters 100 million gallons of liquid high level waste HLW stored in underground tanks and approximately 4 000 cubic meters of solid HLW stored in bins The current DOE estimate of the cost of converting these liquid and solid wastes into stable forms for shipment to a geological repository exceeds 50 billion to be spent over several decades DOE 2000 The Committee on Long Term Research Needs for Radioactive High Level Waste at Department of Energy Sites was appointed by the National Research Council NRC to advise the Environmental Management Science Program EMSP on a long term research agenda addressing the above problems related to HLW stored in tanks and bins at DOE sites

Review of the EPA's Economic Analysis of Final Water Quality Standards for Nutrients for Lakes and Flowing Waters in Florida National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review EPA's Economic Analysis of Final Water Quality Standards for Nutrients for Lakes and Flowing Waters in Florida, 2012-07-05 The Environmental Protection Agency's estimate of the costs associated with implementing numeric nutrient criteria in Florida's waterways was significantly lower than many stakeholders expected This discrepancy was due in part to the fact that the Environmental Protection Agency's analysis considered only the incremental cost of reducing nutrients in waters it considered newly impaired as a result of the new criteria not the total cost of improving water quality in Florida The incremental approach is appropriate for this type of assessment but the Environmental Protection Agency's cost analysis would have been more accurate if it better described the differences between the new numeric criteria rule and the narrative rule it would replace and how the differences affect the costs of implementing nutrient reductions over time instead of at a fixed time point Such an analysis would have more accurately described which pollutant sources for example municipal wastewater treatment plants or agricultural operations would bear the costs over time under the different rules and would have better illuminated the uncertainties in making such cost estimates

Progress Toward Restoring the Everglades National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Water Science and Technology Board, Committee on Independent Scientific Review of Everglades Restoration Progress, 2013-02-04 Twelve years into the Comprehensive Everglades Restoration Project little progress has been made in restoring the core of the remaining Everglades ecosystem instead most project construction so far

has occurred along its periphery To reverse ongoing ecosystem declines it will be necessary to expedite restoration projects that target the central Everglades and to improve both the quality and quantity of the water in the ecosystem The new Central Everglades Planning Project offers an innovative approach to this challenge although additional analyses are needed at the interface of water quality and water quantity to maximize restoration benefits within existing legal constraints Progress Toward Restoring the Everglades The Fourth Biennial Review 2012 explains the innovative approach to expedite restoration progress and additional rigorous analyses at the interface of water quality and quantity will be essential to maximize restoration benefits
