Foundations of Human Sociality

Joseph Henrich,Robert Boyd,Samuel Bowles,Colin Camerer,Ernst Fehr,Herbert Gintis,2004-03-25 What motives underlie the ways humans interact socially Are these the same for all societies Are these part of our nature or influenced by our environments Over the last decade research in experimental economics has emphatically falsified the textbook representation of Homo economicus Literally hundreds of experiments suggest that people care not only about their own material payoffs but also about such things as fairness equity and reciprocity However this research left fundamental questions unanswered Are such social preferences stable components of human nature or are they modulated by economic social and cultural environments Until now experimental research could not address this question because virtually all

subjects had been university students and while there are cultural differences among student populations throughout the world these differences are small compared to the full range of human social and cultural environments A vast amount of ethnographic and historical research suggests that people's motives are influenced by economic social and cultural environments yet such methods can only yield circumstantial evidence about human motives Combining ethnographic and experimental approaches to fill this gap this book breaks new ground in reporting the results of a large cross cultural study aimed at determining the sources of social non selfish preferences that underlie the diversity of human sociality The same experiments which provided evidence for social preferences among university students were performed in fifteen small scale societies exhibiting a wide variety of social economic and cultural conditions by experienced field researchers who had also done long term ethnographic field work in these societies The findings of these experiments demonstrated that no society in which experimental behaviour is consistent with the canonical model of self interest Indeed results showed that the variation in behaviour is far greater than previously thought and that the differences between societies in market integration and the importance of cooperation explain a substantial portion of this variation which individual level economic and demographic variables could not Finally the extent to which experimental play mirrors patterns of interaction found in everyday life is traced The book starts with a succinct but substantive introduction to the use of game theory as an analytical tool and its use in the social sciences for the rigorous testing of hypotheses about fundamental aspects of social behaviour outside artificially constructed laboratories The results of the fifteen case studies are summarized in a suggestive chapter about the scope of the project
