Domrös, Annick Douguédroit, J. Paszynski, L.C. Nkemdirim, 2013-06-29 The impact of climate on human activities and the  
effect of humans on climate are two of the most important areas of inquiry in climatology These interactions conducted  
through physical chemical and biological processes were described as early as Roman and Greek times Marcus Vitruvius 75  
25 B C a famous Roman engineer and architect made the following observation about the climatic conditions necessary for  
founding a city Land ideal for the health is slightly elevated and there should be neither fog nor frost The direction of the  
slope and the distance to the swamps lakes and beaches must also be considered The prevailing wind directions observed by  
a wind tower at the center of the city like Horologium at Athens should be taken into consideration in city planning The main  
and narrow streets should be placed in the middle angle of the two prevailing wind directions Then the location of the  
Pantheons and squares should be decided The influence of humans on climate was a major subject for discussion in the 19th  
century inspired in part by the rapid industrial growth and expanding deforestation of the time D L Howard wrote brilliant  
pieces on the climate of London in the 1830s while G P Marsh discussed the effects of forests on precipitation in the U S A in
