Low Tech Education In A High Tech World:

Low Tech Education in a High Tech World Elizabeth L. Useem, 1986 Having run away because he is bored with school a young Egyptian finds himself involved with a gang of tomb robbers Growth Policy in the Age of High Technology Jurgen Schmandt, Robert Wilson, 2018-03-29 Originally published in 1990 this book provides an authoritative and detailed account of the initiatives of US state governments with science and technology programs designed to foster economic growth Two key questions are posed Do state governments have policy instruments that are sufficiently powerful to affect the levels and growth rates of their regional economies and Are national and global economic forces so powerful that they render state action ineffective Several subsidiary themes are discussed in this context namely the most commonly used policy instruments the impacts on federalism and on governance and how well the universities and other educational institutions serve the economic activities imposed on them **Annual World Bank Conference on Development Economics 2009, Global** Justin Yifu Lin, Boris Pleskovic, 2010-06-21 ABCDE 2009 Global presents selected papers from the ABCDE meetings held June 9-11 2008 in Cape Town South Africa This volume presents papers on Trade and Investment Migration Remittances and Transition from Foreign Aid Higher Education and High tech Industries Human Development and Political Economy **The Diverted Dream** Steven Brint, Jerome Karabel, 1989-09-07 In the twentieth century Americans have increasingly looked to the schools and in particular to the nation's colleges and universities as guardians of the cherished national ideal of equality of opportunity With the best jobs increasingly monopolized by those with higher education the opportunity to attend college has become an integral part of the American dream of upward mobility The two year college which now enrolls more than four million students in over 900 institutions is a central expression of this dream and its invention at the turn of the century constituted one of the great innovations in the history of American education By offering students of limited means the opportunity to start higher education at home and to later transfer to a four year institution the two year school provided a major new pathway to a college diploma and to the nation's growing professional and managerial classes But in the past two decades the community college has undergone a profound change shifting its emphasis from liberal arts transfer courses to terminal vocational programs Drawing on developments nationwide as well as in the specific case of Massachusetts Steven Brint and Jerome Karabel offer a history of community colleges in America explaining why this shift has occurred after years of student resistance and examining its implications for upward mobility As the authors argue in this exhaustively researched and pioneering study the junior college has always faced the contradictory task of extending a college education to the hitherto excluded while diverting the majority of them from the nation's four year colleges and universities Very early on two year college administrators perceived vocational training for semi professional work as their and their students most secure long term niche in the educational hierarchy With two thirds of all community college students enrolled in vocational programs the authors contend that the dream of education as a route to upward mobility as well as the ideal of equal

educational opportunity for all are seriously threatened With the growing public debate about the state of American higher education and with more than half of all first time degree credit students now enrolled in community colleges a full scale historically grounded examination of their place in American life is long overdue This landmark study provides such an examination and in so doing casts critical light on what is distinctive not only about American education but American society itself

Photonic Technology and Industrial Policy Ernest Sternberg,1992-01-01 A revolutionary technological development of the late twentieth century photonics embraces lasers fiber optics imaging devices and optical applications to computing It affects the fortunes of numerous industries and other than conventional microelectronics may now be the leading arena for worldwide technological rivalry While Japan has seen its photonic industries grow faster than any other high technology sector the United States where much of photonics originated has experienced a declining industrial capability in world markets Why is the U S floundering in this critical new technology Are market solutions adequate as a national response to such massive technological change After describing the history and economic implications of photonics this book places these questions in the context of industrial policy debates about the proper role of government in response to strategic industrial sectors The author then assesses the U S public policy response by examining various government programs directed at photonics These programs add up to an implicit government photonics policy but one that is shortsighted incoherent and unplanned Sternberg concludes that it is this failure to plan that explains United States retrogression in a critical technology

subject indexes Beyond College For All James E. Rosenbaum, 2001-11-29 In a society where everyone is supposed to go to college the problems facing high school graduates who do not continue their education are often forgotten Many cannot find jobs and those who do are often stuck in low wage dead end positions Meanwhile employers complain that high school graduates lack the necessary skills for today s workplace Beyond College for All focuses on this crisis in the American labor market Around the world author James E Rosenbaum finds employers view high school graduates as valuable workers Why not here Rosenbaum reports on new studies of the interaction between employers and high schools in the United States He concludes that each fails to communicate its needs to the other leading to a predictable array of problems for young people in the years after graduation High schools caught up in the college for all myth provide little job advice or preparation leading students to make unrealistic plans and hampering both students who do not go to college and those who start college but do not finish Employers say they care about academic skills but then do not consider grades when deciding whom to hire Faced with few incentives to achieve many students lapse into precisely the kinds of habits employers deplore doing as little as possible in high school and developing poor attitudes Rosenbaum contrasts the situation in the United States with that of two other industrialized nations Japan and Germany which have formal systems for aiding young people who are looking for employment Virtually all Japanese high school graduates obtain work and in Germany eighteen year olds routinely hold responsible jobs While the American system lacks such formal linkages Rosenbaum uncovers an encouraging hidden system that helps many high school graduates find work He shows that some American teachers particularly vocational teachers create informal networks with employers to guide students into the labor market Enterprising employers have figures out how to use these networks to meet their labor needs while students themselves can take steps to increase their ability to land desirable jobs Beyond College for All suggests new policies based on such practices Rosenbaum presents a compelling case that the problems faced by American high school graduates and employers can be solved if young people employers and high schools build upon existing informal networks to create formal paths for students to enter the world of work A Volume in the American Sociological Association s Rose Series in Sociology **Research Anthology on Inclusive Practices for**
