Lower Palaeozoic Green Algae From Southe:

Calcareous Algae and Stromatolites Robert Riding, 2012-12-06 This volume provides a comprehensive overview of calcareous algae and stromatolites. It contains reviews by leading specialists of major groups together with accounts of floras through time. It deals with marine and non marine benthic and planktic and modern as well as ancient examples. As the first multi authored review of the field ever published in English it is an essential reference text for this complex field. It is designed for both postgraduate researchers and professional scientists who require up to date and authoritative information on these long ranging organisms and fabrics which are of wide evolutionary environmental and sedimentary significance.

Microfacies Analysis of Limestones E. Flügel, 2012-12-06 **The Great Ordovician Biodiversification Event** Barry D. Webby, Florentin Paris, Mary L. Droser, Ian G. Percival, 2004-04-14 Two of the greatest evolutionary events in the history of life on Earth occurred during Early Paleozoic time. The first was the Cambrian explosion of skeletonized marine animals about 540 million years ago. The second was the Great Ordovician Biodiversification Event which is the focus of this book. During the 46 million year Ordovician Period 489-443 m.y. a bewildering array of adaptive radiations of Paleozoic and Modern type biotas appeared in marine habitats: the first animals, arthropods, walked on land and the first non vascular bryophyte like plants based on their cryptospore record colonized terrestrial areas with damp environments. This book represents a compilation by a large team of Ordovician specialists from around the world who have enthusiastically cooperated to produce this first globally orientated internationally sponsored IGCP International Geological Correlation Program project on Ordovician biotas. The major part is an assembly of genus and species level diversity data for the many Ordovician fossil groups. The book also presents an evaluation of how each group diversified through Ordovician time with assessments of patterns of change and rates of origination and extinction. As such it will become the standard work and data source for biotic studies on the Ordovician Period. **Fossil Algae** E. Flügel, 2012-12-06 Receptaculitids Matthew H. Nitecki, Harry Mutvei, Doris V. Nitecki, 2012-12-06 Receptaculitids are extinct high level fossils that provide a window into the history of life. After the discovery and analysis of a deposit of phosphatized receptaculitids on the Baltic Sea island of land the authors conclude that receptaculitids possess an attribute not found in any other group of organisms living or fossil. Encyclopedia of Geology, 2020-12-16 Encyclopedia of Geology Second Edition presents in six volumes state of the art reviews on the various aspects of geologic research all of which have moved on considerably since the writing of the first edition. New areas of discussion include extinctions, origins of life, plate tectonics and its influence on faunal provinces, new types of mineral and hydrocarbon deposits, new methods of dating rocks and geological processes. Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non geology professionals seeking up to date reviews of geologic research. Provides a comprehensive and accessible one stop shop for information on the subject of geology explaining methodologies and technical jargon used in the field. Highlights connections between geology and other

physical and biological sciences tackling research problems that span multiple fields Fills a critical gap of information in a field that has seen significant progress in past years Presents an ideal reference for a wide range of scientists in earth and environmental areas of study **Phosphatic Microfossils from the Ordovician of the United States** Matthew H.
