Teaching Innovations in Economics María del Carmen Valls Martínez, José-María Montero, 2024-10-31 This book highlights the latest technological innovations in economics education Economics as a discipline not only studies the relationship between ends and scarce means which can be used alternatively but also serves as a social science that uses historical data to predict future events a task complicated by the influence of human behavior In economics a solid theoretical foundation alone is insufficient practical application requires a deep understanding of statistics With the vast amount of information available today data processing is now performed using specialized software Consequently teaching economics demands a wide range of complex skills that have significantly evolved in recent years driven by the growing interest in educational innovation among professors and scientists further accelerated by advancements in new technologies Moreover economics education is increasingly aligned with the global concern for sustainability as emphasized in the United Nations Agenda 2030 Professors are now integrating sustainability into syllabi and teaching methodologies This book covers key topics such as Technological and innovative advancements in economics education New teaching learning theories and models in economics education The impact of digital transformation on economics education The role of artificial intelligence in economics education Addressing special educational needs in economics education Evaluation of the teaching learning process in economics Assessment of student learning in economics Development of materials and tools for economics education Final projects Undergraduate and Master s in economics Authored by leading professors and researchers in the field this book presents a collection of chapters that rigorously explore teaching innovations in economics Reconstructing Keynesian Macroeconomics Volume 3 Carl Chiarella, Peter Flaschel, Willi Semmler, 2014-12-17 This book represents the third of three volumes offering a complete reinterpretation and restructuring of Keynesian macroeconomics and a detailed investigation of the disequilibrium adjustment processes characterizing the financial the goods and the labour markets and their interaction This book offers a full treatment of the interlinkages between the real and the financial markets including an analysis of banking credit and endogenous money and asset markets It remains critical of quite frequently used conventional macro models that have dropped the tradition of studying the macroeconomic feedback channels well known in the history of macroeconomics Those feedback mechanisms are known to have the potential for instabilities with respect to real markets price dynamics and financial markets In this volume a particular emphasis is given to the financial real interaction The research in this book with its focus on Keynesian propagation mechanisms provides a unique alternative to the black box shock absorber approaches that dominate modern macroeconomics The main conclusion of the work is that policy makers need to reconsider Keynesian ideas but in the modern form in which they are expressed in this volume Reconstructing Keynesian Macroeconomics will be of interest to students and researchers who want to look at alternatives to the mainstream macrodynamics that emerged from the Monetarist critique of Keynesianism This book will also engage central

Exploring Business Ecosystems and Innovation Capacity Building in

Global Economics Joshi, Mihir, Brahmi, Mohsen, Aldieri, Luigi, Vinci, Concetto Paolo, 2023-04-11 All nations must become self-reliant and as such need to analyze the concept and terminologies associated with business ecosystems and social innovation ecosystems. Further study on the challenges and opportunities is required to ensure countries remain stable and continue to develop. *Exploring Business Ecosystems and Innovation Capacity Building in Global Economics* explores the application of different theories and frameworks that contribute to the business ecosystem through empirical and conceptual research. The book also states the issues and challenges that occurred in society during the pandemic and considers the development of virtual business environments. Macroeconomic Policy Farrokh K. Langdana, 2022-04-04

This book is an applications-oriented text designed for individuals who desire a hands-on approach to analyzing the effects of fiscal and monetary policies. Significantly updated for the fourth edition, the text provides an understanding of the global economy in the wake of the COVID crisis, discussing topics such as pandemic-related supply and demand-side shocks, the role of Modern Monetary Theory (MMT) in financing COVID rescue plans, the effect of the US, India, Eurozone, and China's post-COVID economies on emerging and transitioning economies, and the resurgence of inflation. This edition includes deeper coverage on the issue of budget deficit sustainability and on trade wars, especially in a global context, and revisits the life cycles of speculative asset price (SAP) bubbles, especially in the housing markets and in SPACs. The fourth edition contains several brand-new cases and media articles that are carefully positioned to relate explicitly to theory and to look ahead to and preempt global macro situations and policies in the years to come. MBA students and Executive MBA students who appreciate the importance of monetary and fiscal analysis will find this text to be right on target. Financial analysts and individual investors who need to strip away economic myths and jargon and systematically examine and understand the effects of macro policies on variables such as inflation, output, employment, and interest rates will also find the book extremely useful.

The Oxford Handbook of Africa and Economics

Célestin Monga, Justin Yifu Lin, 2015-07-02 A popular myth about the travails of Africa holds that the continent's long history of poor economic performance reflects the inability of its leaders and policymakers to fulfill the long list of preconditions to be met before sustained growth can be achieved. These conditions are said to vary from the necessary quantity and quality of physical and human capital to the appropriate institutions and business environments. While intellectually charming and often elegantly formulated, that conventional wisdom is actually contradicted by historical evidence and common sense. It also suggests a form of intellectual mimicry that posits a unique path to prosperity for all countries regardless of their level of development and economic structure. In fact, the argument underlining that reasoning is tautological and the policy prescriptions derived from it are fatally teleological.

income countries are by definition those where such ingredients are missing. None of today's high income countries started its growth process with the required and complete list of growth ingredients. Unless one truly believes that the continent of Africa and most developing countries are ruled predominantly if not exclusively by plutocrats with a high propensity for sadomasochism, the conventional view must be re-examined, debated and questioned. This volume, the second of the Oxford Handbook of Africa and Economics, reassesses the economic policies and practices observed across the continent since independence. It offers a collection of analyses by some of the leading economists and development thinkers of our time and reflects a wide range of perspectives and viewpoints. Africa's emergence as a potential economic powerhouse in the years and decades ahead amply justifies the scope and ambition of the book. *Exploring Macroeconomics* Robert L. Sexton, 2005

Drawing on the studies by the Asia Competitiveness Institute (ACI) at the Lee Kuan Yew School of Public Policy (LKYSPP), National University of Singapore (NUS), this book titled *Balanced Sustainable and Competitiveness Enhancement Study for Vietnam: A Critical Evaluation with Development Potentials*, which is a joint research collaboration between the National Research Project on Improving Vietnam's Competitiveness and ACI/LKYSPP/NUS, provides a detailed assessment of the Vietnamese economy. We contend that Vietnam is at a critical juncture in its development whereby a new wave of far-reaching reforms is required to address persistent structural weaknesses and unleash the country's economic potentials. In addition, Vietnam's new growth model must tackle widening regional disparities, which puts Vietnam at risk of becoming one country with two economies, where the southern region of Vietnam pulls too far ahead of its northern and central counterparts. Based on our analysis, we propose a comprehensive policy roadmap for Vietnam to achieve balanced and sustainable development for enhanced competitiveness. The successful completion of this reform agenda will set Vietnam firmly on a dynamic growth path, which will allow the country to catch up with the more advanced ASEAN member states by 2040. *World Scientific Handbook Of Global Health Economics And Public Policy (A 3-volume Set)* Richard M.
