What drives government popularity For decades scholars journalists and political pundits alike have converged on a single answer the economy A rising economy lifts the popularity of the government and if the economy's fortunes turn south so too does that of the government This conventional wisdom informs politicians' decisions as well as the scholarly commentary on parties and elections Yet the conditions that underlie this model have changed in many countries as globalization has shifted control away from national policymakers as non economic cultural issues have risen in importance and as our politics have become more polarized At the same time since the Great Recession in 2008 persistent economic volatility has kept the economy on the agenda What then fuels government popularity in our current volatile environment Are political fortunes tied to economic stability as in the past Or has the economy popularity link the popularity function been severed by a host of new and less predictable factors in post industrial societies To answer these questions *Economics and Politics Revisited* uses data from the Executive Approval Project EAP a cross nationally comparable data on leader popularity to model the fundamental dynamics of government support in advanced industrial democracies Eleven country specific chapters each written by experts in the politics of the country examine the role of economic performance in generating leader support in each country In all cases chapter authors show that the economy matters for popularity However the economy popularity link is stronger in some countries than others Further chapters leverage EAP series to highlight change over time Pooled analyses extend these findings highlighting how the public's responses to the economy are reduced when political campaigns shift to non economic issues and when parties are polarization on non economic issues Collectively the volume highlights how evolving issue agendas are changing the nature of political accountability in advanced industrialized democracies While the economy remains important the book calls on students of political accountability to give greater attention to the role of non economic issues *Comparative Politics* is a series for researchers teachers and students of political science that deals with contemporary government and politics Global in scope books in the series are characterized by a stress on comparative analysis and strong methodological rigour The series is published in association with the European Consortium for Political Research For more information visit www.ecpr.net The series is edited by Nicole Bolleyer Chair of Comparative Political Science Geschwister Scholl Institut LMU Munich and Jonathan Slapin Professor of Political Institutions and European Politics Department of Political Science University of Zurich

THE IMPACT OF ECONOMIC PERCEPTIONS ON SUPPORT FOR THE INCUMBENT GOVERNMENT Andreea STANCEA, 2025-01-01 This book explores the relationship between individuals' economic perceptions and their support for incumbent governments in elections placing much emphasis on how personal economic well being influences voting decisions Based on the theory of economic voting it analyzes the extent to which favorable economic perceptions enhance the

probability of re electing the incumbent The book uses rational choice models to investigate variables such as macroeconomic indicators and individual beliefs The present case study refers to Romania drawing comparisons with a number of European countries especially those situated in the core and periphery of the EU Analysis of the data from the 2012 Romanian Elections Study and the 2019 European Electoral Study serves to test these hypotheses The empirical research conducted in this book provides a comparative analysis of economic perceptions and government support presenting new evidence of the influence of economic perceptions on electoral behavior in transition economies The book finally states that political decisions by the public are driven by retrospective prospective sociotropic and egotropic views about the economy

Winners and Losers Diana C. Mutz, 2021-07-27 From acclaimed political scientist Diana Mutz a revealing look at why people s attitudes on trade differ from their own self interest *Winners and Losers* challenges conventional wisdom about how American citizens form opinions on international trade While dominant explanations in economics emphasize personal self interest and whether individuals gain or lose financially as a result of trade this book takes a psychological approach demonstrating how people view the complex world of international trade through the lens of interpersonal relations Drawing on psychological theories of preference formation as well as original surveys and experiments Diana Mutz finds that in contrast to the economic view of trade as cooperation for mutual benefit many Americans view trade as a competition between the United States and other countries a contest of us versus them These people favor trade as long as they see Americans as the winners in these interactions viewing trade as a way to establish dominance over foreign competitors For others trade is a means of maintaining more peaceful relations between countries Just as individuals may exchange gifts to cement relationships international trade is a tie that binds nations together in trust and cooperation *Winners and Losers* reveals how people s orientations toward in groups and out groups play a central role in influencing how they think about trade with foreign countries and shows how a better understanding of the psychological underpinnings of public opinion can lead to lasting economic and societal benefits

Votes, Vetoes, and the Political Economy of International Trade Agreements Edward D. Mansfield, Helen V. Milner, 2012-05-27 Preferential trading arrangements PTAs play an increasingly prominent role in the global political economy two notable examples being the European Union and the North American Free Trade Agreement These agreements foster economic integration among member states by enhancing their access to one another s markets Yet despite the importance of PTAs to international trade and world politics until now little attention has been focused on why governments choose to join them and how governments design them This book offers valuable new insights into the political economy of PTA formation Many economists have argued that the roots of these agreements lie in the promise they hold for improving the welfare of member states Others have posited that trade agreements are a response to global political conditions Edward

Mansfield and Helen Milner argue that domestic politics provide a crucial impetus to the decision by governments to enter trade pacts Drawing on this argument they explain why democracies are more likely to enter PTAs than nondemocratic regimes and why as the number of veto players interest groups with the power to block policy change increases in a prospective member state the likelihood of the state entering a trade agreement is reduced The book provides a novel view of the political foundations of trade agreements

Voting Behavior in Indonesia since Democratization Saiful Mujani,R. William Liddle,Kuskridho Ambardi,2018-03-01 Indonesia is the world s third largest democracy after India and the USA and the only fully democratic Muslim democracy yet it remains little known in the comparative politics literature This book aspires to do for Indonesian political studies what *The American Voter* did for American political science It contributes a major new case the world s largest Muslim democracy to the latest research in cross national voting behavior making the unique argument that Indonesian voters like voters in many developing and developed democracies are critical citizens or critical democrats The analysis is based on original opinion surveys conducted after every national level democratic election in Indonesia from 1999 to the present by the respected Indonesian Survey Institute and Saiful Mujani Research and Consulting

Self-Interest and Public Interest in Western Politics Leif Lewin,1991-04-11 Is it self interest or public interest that dominates Western politics This question has been debated in many fields and through the 1980s a consensus developed supported by extensive research that in their political decisions and actions people are largely motivated by self interest not by common good In this book combining in a novel way insights from different fields including rational choice theory political philosophy and electoral research Leif Lewin examines more than two hundred studies of democracy in action from seventeen countries He looks at the behaviour and attitudes of voters bureaucrats and politicians in turn and challenges the accepted wisdom In his wide ranging review of the literature he shows that people are in fact actuated by broader considerations than their own short sighted interests that they act politically in the shadow of the future that they find there are overwhelming reasons to try to contribute to the long term common good Professor Lewin shows in short that the plausible and prevalent theory that egoism rules simply don t match the facts

News That Matters Shanto Iyengar, Donald R. Kinder, 2024-05-31 Almost twenty five years ago Shanto Iyengar and Donald R Kinder first documented a series of sophisticated and innovative experiments that unobtrusively altered the order and emphasis of news stories in selected television broadcasts Their resulting book News That Matters now hailed as a classic by scholars of political science and public opinion alike is here updated for the twenty first century with a new preface and epilogue by the authors Backed by careful analysis of public opinion surveys the authors show how despite changing American politics those issues that receive extended coverage in the national news become more important to viewers while those that are ignored lose credibility Moreover those issues that are prominent in the news stream continue to loom more

heavily as criteria for evaluating the president and for choosing between political candidates News That Matters does matter because it demonstrates conclusively that television newscasts powerfully affect opinion All that follows whether it supports modifies or challenges their conclusions will have to begin here The Public Interest **The Particularistic President**

Douglas L. Kriner, Andrew Reeves, 2015-06-12 As the holders of the only office elected by the entire nation presidents have long claimed to be sole stewards of the interests of all Americans Scholars have largely agreed positing the president as an important counterbalance to the parochial impulses of members of Congress This supposed fact is often invoked in arguments for concentrating greater power in the executive branch Douglas L Kriner and Andrew Reeves challenge this notion and through an examination of a diverse range of policies from disaster declarations to base closings to the allocation of federal spending show that presidents like members of Congress are particularistic Presidents routinely pursue policies that allocate federal resources in a way that disproportionately benefits their more narrow partisan and electoral constituencies Though presidents publicly don the mantle of a national representative in reality they are particularistic politicians who prioritize the needs of certain constituents over others Political Economy of Elections and Voting

Behaviour in Ghana's Fourth Republic Gbensuglo Alidu Bukari, 2023-08-02 This book brings to the fore the interplay between economics elections and politics in Ghana s Fourth Republic It examines the determinants and consequences of voting with an explicit emphasis on elections and the economy and explains the state of academic understanding of how voters respond to economic stimuli attribute responsibility and hold political parties and elected representatives electorally accountable In addition the book reveals the consequences of voting and how regularities in voting behaviour influence policy making redistribution and specific policy making Economic development related issues have consistently ranked among the most important issues in elections meaning that the economic vote is the strongest evidence that citizens actually hold those who govern them accountable in the new democracies This book therefore provides one of the first analyses of the relationship between elections economic development related issues and voting behaviour by providing an empirical analysis within the multi party democratic framework of Ghana s Fourth Republic Demands on Democracy José María Maravall, 2016-05-05

Why are representative democracies extensively criticised yet remain widely aspired to throughout the world Many citizens believe that democratic politicians operate with privileged information that allows them autonomy from genuine democratic controls a phenomenon reinforced by the opacity of internal party politics In established democracies throughout the world there is a widespread perception that political parties compete for power yet no significant differences exist between them Moreover economic inequalities are no longer redressed by national governments in a world where markets are dominant and relevant decisions have been taken out of domestic politics Citizens vote but their choice is hardly relevant This has led to widespread demands for more democracy But what does that mean in practice Can democracies introduce greater representation of citizens interests Do politicians operate as an autonomous caste hardly challenged by voters Has political

competition become irrelevant for the welfare of people Do citizens want more democracy in internal party politics And turning beyond the nation state has the European Union changed the scope of policy alternatives and influenced the accountability of politicians What have been the consequences of European integration for national democracies In his major new book Jos Mar a Maravall examines these and many other questions fundamental to democratic politics in the 21st Century In doing so he draws extensively on original empirical evidence from 21 OECD parliamentary democracies from 1945 to 2010 and 1 259 country year observations focused on politics representation parties inequality economic policies and the political and economic conditions of European integration

The Technology Pork Barrel Linda R. Cohen, Roger G. Noll, 2002-07-31 American public policy has had a long history of technological optimism The success of the United States in research and development contributes to this optimism and leads many to assume that there is a technological fix for significant national problems Since World War II the federal government has been the major supporter of commercial research and development efforts in a wide variety of industries But how successful are these projects And equally important how do economic and policy factors influence performance and are these influences predictable and controllable Linda Cohen Roger Noll and three other economists address these questions while focusing on the importance of R D to the national economy They examine the codependency between technological progress and economic growth and explain such matters as why the private sector often fails to fund commercially applicable research adequately and why the government should focus support on some industries and not others They also analyze political incentives facing officials who enact and implement programs and the subsequent forces affecting decisions to continue terminate or redirect them The central part of this book presents detailed case histories of six programs the supersonic transport communications satellites the space shuttle the breeder reactor photovoltaics and synthetic fuels The authors conclude with recommendations for program restructuring to minimize the conflict between economic objectives and political constraints
