Research and Advanced Technology for Digital Libraries Rachel Heery, Liz Lyon, 2005-01-11 We are delighted to present the ECDL 2004 Conference proceedings from the 8th European Conference on Research and Advanced Technology for Digital Libraries at the University of Bath, Bath, UK. This followed an impressive and geographically dispersed series of locations for previous events: Pisa 1997, Helsinki 1998, Paris 1999, Lisbon 2000, Darmstadt 2001, Rome 2002, and Trondheim 2003. The conference reflected the rapidly evolving landscape of digital libraries, both in technology developments and in the focus of approaches to implementation. An emphasis on the requirements of the individual user and of diverse and distributed user communities was apparent. In addition, the conference programme began to address, possibly for the first time, the associated themes of e-research, e-science, and e-learning and their relationship to digital libraries. We observed increasing commonality in both the distributed information architectures and the technical standards that underpin global infrastructure developments. Digital libraries are integral to this information landscape and to the creation of increasingly powerful tools and applications for resource discovery and knowledge extraction. Digital libraries support and facilitate the data and information flows within the scholarly knowledge cycle and provide essential enabling functionality for both learners and researchers. The varied and innovative research activities presented at ECDL 2004 demonstrate the exciting potential of this very fast-moving field. The 148 papers, 43 posters, 5 panels, 14 tutorials, and 4 workshops submitted this year were once again of the highest quality.
