channels can be characterized by their conductance ion selectivity pharmacology and voltage sensitivity These properties are mainly dictated by the amino acids sequence and structure of the pore forming subunit s presence of accessory subunit s membrane composition intra and extracellular ions concentration Noteworthy despite a profound variety of these ion channels characteristics it seems that most of them obey to the same global four fold structure now obtained by several X ray crystallography experiments Given the wealth of electrophysiological biochemical optical and structural data regarding ion channels voltage dependency we decided to put together in this e book up to date reviews describing the molecular details of these complex voltage gated channels
