Manual Of Remote Sensing Vol I:

Manual of Remote Sensing, Remote Sensing for the Earth Sciences Andrew N. Rencz, Robert A.

Ryerson, 1999-03-08 An outstanding new reference work REMOTE SENSING for the Earth Sciences Remote Sensing for the Earth Sciences is a comprehensive up to date resource for geologists geophysicists and all earth scientists Produced in cooperation with the American Society for Photogrammetry and Remote Sensing it is the third volume of the Manual of Remote Sensing Third Edition the widely accepted basic reference work in the field It brings together contributions from an international team of scientists active in remote sensing and earth sciences research The book is organized for quick access to topics of particular interest beginning with coverage of spectral characteristics that focuses on the theory of rock mineral soil and vegetation spectra as well as planetary geology The second section on data analysis is devoted to procedures used in information extraction and techniques used in the visual display of data particularly in the integration of various geospatial data The third section addresses applications of remote sensing in areas such as mineral and hydrocarbon exploration stratigraphic mapping engineering geology and environmental studies The final chapters offer a discussion of sensors relevant to the earth sciences including radar visible infrared and geophysical sensors along with case study examples Complete with color figures helpful illustrations and thorough references including Internet sources this volume is a major resource for researchers and practitioners working in the earth and environmental sciences **Manual of remote**

Physical Fundamentals of Remote Sensing Erwin

Schanda, 2012-12-06 Ten years ago the author together with eight co authors edited a textbook Remote Sensing for Environmental Sciences within the series on Ecological Studies of Springer Verlag At that time there were not yet many books available on remote sensing The decade that has elapsed was marked by a spectacular development in this field This development took place in many directions by widening the areas of application by improvements of the methods and the sensors by the introduction of new versatile platforms but also by deepening the knowledge of the theoretical foundations This evolution improved the ability to explain the interaction between electromagnetic radiation and natural objects which in its turn allowed for better modelization and for the creation of refined mathematical tools in the processing of remotely sensed data and in the determination of the physical status of remote objects The community of research workers engaged in development and use of remote sensing methods changed accordingly from a modest group of scientists in the early 1970 s to a considerable branch of specialized and interdisciplinary activity The training of students had to be adapted to cope with the increasing number of people entering this new field and with the increasing quality of the material to be presented
