Manual of Cardiac Surgery B.J. Harlan,A. Starr,F.M. Harwin,2012-12-06 difficult to represent it as the surgeon sees it and to understand the anatomy which is not always visible In part this was accomplished by painting on both surfaces of transparent paper to create the illusion of looking through superficial layers to the deeper structures A combination of color media including colored pencil graphite carbon pastels and transparent and opaque watercolors enabled me to convey the field with minimal loss of reality or dimension Of equal importance was the availability for every illustration of direct surgical observation surgical photographs fresh specimens and the surgical instruments The sequence of creation was first the discussion of desired illustrations then a rough sketch consultation with the surgeons finished pencil drawing another consultation and finally the color rendering These color renderings were then checked against actual surgery for accuracy in representation of tissues instrumentation tissue responses to manipulation and consistency of representation From these processes evolved a technique that facilitated the flow of information in logical sequence from one step to the next and from one procedure to another always focusing the attention of the audience toward what is pertinent and away from the extraneous

Manual of Vascular Surgery E.J. Wylie,R.J. Stoney,W.K. Ehrenfeld,2012-12-06 Of all the developing fields of surgery few have had the impact of vascular surgery in affecting so large a segment of the population with its potential for relief of disability or the prolongation of life As would be anticipated the interest of surgeons in this evolving specialty has been largely focused upon the selection of the most appropriate operations and the development of modifications or new procedures to overcome the limitations of previous ones The literature contains numerous conflicting claims on the relative merits of various procedures Those approaching this field for the first time may understandably be confused Yet if one were to approach any single vascular surgeon at any given time he would upon request receive a firm and precise listing of preferred procedures The procedures described in this two volume publication are those which we currently favor Their selection is the result of continuing analysis of our own experience of the last 25 years All patients have been available for prolonged follow up evaluation Late failures often

identified techniques that lessened the durability of initially satisfactory operations and stimulated the development of modifications or trials with alternate operations Particular attention is directed here to the manner in which knowledge of the natural history of disease influences the choice of operation *Psychopathological and Neurological Dysfunctions Following Open-Heart Surgery* R. Becker, J. Katz, M.-J. Polonius, H. Speidel, 2012-12-06 The Surgeon as a Humanist Medicine is the most humane of the sciences and the most scientific of the humanities Cardiac surgery today provides a most natural confluence for the high technology of medicine and the humanistic values traditional in the practice of medicine The cardiac surgeon must of necessity be knowledgeable in physiology and cardiology and must also possess consummate surgical technical skill The attainment of these skills over long years of training leads many of these surgeons to believe or perceive this long struggle as an apotheosis of their position in life rather than as an education in bringing the latest scientific advances to the care of patients The problem lies not only with the cardiac surgeon it is also contributed to by the patients perception of heart surgery heart disease and the mystery of the science and physiology involved The patient with heart disease expecting surgery may for the first time be facing the finiteness of his existence The low risk of cardiac surgery to day notwithstanding the coronary surgery patients most likely a type A personality is faced with a perceived threat to his invulnerability his self image his family his independence his control of situations and his very existence Manual of Vascular Access, Organ Donation, and Transplantation A.J. Henriksen, R.L. Simmons, M.E. Finch, N.L. Ascher, J.S. Najarian, 2012-12-06 This book is a compilation of common and uncommon surgical and ancillary techniques that we have found useful in the multiorgan transplantation program at the University of Minnesota Descriptions of these techniques are not available at a single source elsewhere Use the book as a teaching aid a source of workable techniques and as a reference for individuals with relatively little experience in a particular area of transplantation Because of the varying levels of expertise of our readers vascular access is described in exquisite detail as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts The chapter on organ preservation is aimed at the surgeon or beginning technician who must learn how to do it from scratch even the catalogue numbers of the necessary equipment are included In contrast the chapters on heart liver and pancreas transplantation while omitting fine points of suture technique concentrate on the essential principles and safeguards Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique The chapters on cadaver organ donation are perhaps the most innovative They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation We hope that the book will become available to centers that while not performing liver pancreas or heart transplants wish to serve as donation centers **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), *Warren's Operation* G.P. Marzoli, S. Vesentini, 2012-12-06 I have particular pleasure in introducing this publication by Gian Pietro Marzoli and Sergio Vesentini

Years ago they enthusiastically accepted my suggestion that they should take specific interest in the clinical and surgical problem of portal hypertension and assess the proposals of surgical experience with regard to this debated physiopathological picture. These thanks are all the more real because in this way the school's attention remained fixed on a subject that had already attracted it profoundly from the start with Giovanni Castiglioni and Vittorio Pettinari as heads of the school and then threatened to die away into general conformism. In Italy precariousness is easily extended to the concept of school continuity. In Warren's proposal 1967 of distal splenorenal anastomosis with disconnection of the spleno-oesophageal from the mesenteric district I felt there was an intelligent attempt to solve all the basic problems albeit in different ways. An attempt that is to say at alleviating the gastro-oesophageal circulation thus avoiding haemorrhage and at ensuring that the liver would maintain the circulatory efficiency with which it was still endowed. The spleen was retained but there was reason to think that by reducing blood stasis within its ambit it would be possible to manage or alleviate any hypersplenism not an absurd hypothesis if the Americans had sometimes noted in their material functional and even anatomical reversion of the splenopathy after a simple portacaval shunt.

Current Catalog National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965-70. *Medical and Health Care Books and Serials in Print*, 1997. *The Greater OMENTUM* D. Liebermann-Meffert, H. White, E. Vaubel, 2012-12-06. Since RUTHERFORD MORISON left us with the concept of the Omentum being the abdominal policeman clinicians have tacitly assumed that they know sufficient about the structure and function of this organ. However interest in the omentum and its relationship to clinical surgery has recently been developing. This book examines all aspects with special reference to surgery and should provide a welcome impetus in research and clinical practice. The editors and contributors have produced a book which is comprehensive and well illustrated and contains detailed references to the important original sources so essential in a work of this nature. It is written for those who wish to share the delight of acquiring knowledge even about a comparatively humble organ as well as for practical surgeons. Both will find ample information to arouse their interest and expand their surgical horizons in exciting ways of which they will almost certainly not have dreamt. I welcome a book of this calibre on a subject which deserves our increasing interest. I delight in the fact that it is dedicated to my friend and colleague MARTIN ALLGOWER. *Manual of Vascular Surgery* Edwin J.. Wylie, Ronald J. Stoney, William K. Ehrenfeld, 1980. Catecholamines and the Heart W. Delius, E. Gerlach, H. Grobecker, W. Kübler, 2012-12-06. An International Symposium Catecholamines and the Heart was held in Munich in May 1981 which was organized in cooperation with the Council on Cardiac Metabolism of the International Society and Federation of Cardiology and with the Microcirculation Working Group of the European Society of Cardiology. It was the aim of the organizers to evaluate in this Symposium the recent advances made in the field of sympathetic control of heart function. Particular attention was given to neural sympathetic pathways to mechanisms and consequences of adrenoceptor stimulation and blockade as well as to clinically relevant implications mainly

regarding the significance of catecholamines and of adrenoceptors in various heart diseases The broad scope was covered in 34 papers presented by physiologists pharmacologists and cardiologists during a two day meeting which was attended by an international audience This book includes all papers as well as the discussions following each presentation To accomplish rapid publication the manuscripts are published as submitted by the authors The discussions were edited making use of the written questions and answers of the discussants The Symposium was generously sponsored by Astra Chemicals GmbH Wedell Holstein Germany which thus made possible a very fruitful exchange of information ideas and concepts between specialists in various disciplines The organizers gratefully acknowledge this support once again and would like to thank Dr T Kreuzer the representative of Astra Chemicals for his personal engagement
