Manual Of Nonpharmacological Control Of Hypertension:

Manual of Nonpharmacological Control of Hypertension J.R. Viskoper, 2012-12-06 The prevention and correction of high blood pressure obviously is not an end in itself but a means of preventing cardiovascular complications It is tempting to resort to antihypertensive drugs for the simple reason that current preparations are easy to dose and to take There is a variety of reasons however to take advantage of the antihypertensive potential of nonpharmacological approaches first For one thing the use of tablets tends to accentuate the negative effects of labelling a subject as hypertensive The act of taking tablets per se may elicit a spectrum of subjective adverse effects as we have learned from placebo controlled therapeutic trials Even more importantly the benefits of antihypertensive drug treatment are largely confined to the reduction of stroke and disease of the large vessels With regard to incidence of cardiac events some modest beneficial effects have been registered such as a decrease in congestive heart failure and in the fatality rate of myocardial infarction The effects on the incidence of coronary heart disease are only marginal at best This disappointing finding has been ascribed to various factors unwanted metabolic effects of antihypertensive drugs inadvertent drops in diastolic pressure interfering with coronary perfusion and last but not least failure to eliminate risk factors other than high blood pressure smoking alcohol abuse lipid and glucose disturbances obesity and the hemodynamic disadvantages of a sedentary life Most of these additional noxious factors are refractory to drug treatment and call for modification of life style **Manual of Hypertension** BA

Handbook of Clinical Behavior Therapy with Adults Alan S. Bellack, Michel Hersen, 2012-12-06 Despite the occasional outcries to the contrary the field of behavior therapy is still growing and the asymptote has not been reached yet The umbrella of behavior therapy continues to enlarge and still is able to encompass new theories new concepts new research new data and new clinical techniques Although the number of new behavioral journals now has stabilized we still see a proliferation of books on the subject In the past few years however we have seen considerable specialization within behavior therapy No longer is it possible to be a generalist and remain fully abreast of all the relevant developments Thus we see behavior therapists who deal with adults those who deal with children those whose specialty is hospital psychiatry and those who see themselves as practitioners of behavioral medicine Even within a subarea such as behavioral medicine specialization runs supreme to the extent that there are experts in the specific addictions adult medical problems and child medical problems Given the extent of specialization there are numerous ways to skin the proverbial cat We therefore have chosen to look at the contemporary work in behavior therapy that is being carried out with adults in part of course because of our long standing interest in this area as teachers researchers and clinicians In so doing we have chosen to highlight the clinical aspects of the endeavor but not at the expense of the rich research heritage for each of the specific adult disorders
