The Geography of the Ocean Anne-Flore Laloë, 2016-04-14 Despite the fact that the vast majority of the earth's surface is made up of oceans there has been surprisingly little work by geographers which critically examines the ocean space and our knowledge and perceptions of it This book employs a broad conceptual and methodological framework to analyse specific events that have contributed to the production of geographical knowledge about the ocean These include but are not limited to Christopher Columbus first transatlantic journey the mapping of nonexistent islands the establishment of transoceanic trade routes the discovery of largescale water movements the HMS Challenger expedition the search for the elusive Terra Australis Incognita the formulation of the theory of continental drift and the mapping of the seabed Using a combination of original empirical archival material and cartographic and theoretical sources this book uniquely brings

together fascinating narratives throughout history to produce a representation and mapping of geographical oceanic knowledge. It questions how we know what we know about the oceans and how this knowledge is represented and mapped. The book then uses this representation and mapping as a way to coherently trace the evolution of oceanic spatial awareness. In recent years, particularly in historical geography, discovering and knowing the ocean space has been a completely separate enterprise from discovering and colonising the lands beyond it. There has been such focus on studying colonised lands yet the oceans between them have been neglected. This book gives the geographical ocean a voice to be acknowledged as a space where history, geography, and indeed historical geography took place.

Handbook on the History and Culture of the Black Sea Region Ninja Bumann, Kerstin S. Jobst, Stefan Rohdewald, Stefan Troebst, 2024-12-30

Following the annexation of Crimea by the Russian Federation in spring 2014, 160 years after the Crimean War, and the full-scale invasion of Ukraine in February 2022, the Black Sea region has again become the focus of world history. In this handbook, international scholars from various historical and cultural disciplines provide deep historical insights into the structures of conflict, cooperation, and interrelations between the Balkans, the Middle East, the Caucasus, and Eastern Europe in the space referred to as the Black Sea world. The trans-maritime communication and intra-regional circulations spanning from Antiquity to the present day via Byzantium, the Polish-Lithuanian Commonwealth, the Crimean Khanate, the Venetian, Safavid, Ottoman, and Romanov empires, two World Wars, and the Cold War highlight the autonomy of this historical region in the larger transcontinental setting designated in various times and varying languages as the Pontus, Euxinus, the Mare Maggiore, the Kara Deniz, the Chernoe More, or the Black Sea. This voluminous edition sheds real light upon the history of the Black Sea region from antiquity until the end of the 20th century. Not only does this first-rate book provide a host of excellent historical essays across time; it also devotes considerable attention to important questions regarding how the Black Sea region is conceptualized and theorized. A very useful contribution. James H. Meyer, Montana State University.

In the wake of several research projects, monographs, and journals, this is the first groundbreaking handbook on the cohesive history of the Black Sea as a historical meso-region. It gathers 39 excellent contributions that provide the conceptual apparatus to survey the history of the region from a Greek to Byzantine to Ottoman lake to conflicting rivalries to its recent transformation from a quasi-Soviet to a quasi-NATO lake, examine the ideas that underpin the various national, ethnic, and religious identities, research the different mobilities through migration, transport, infrastructure, and take stock of its turbulent history through conflicts and war. Maria Todorova, University of Illinois at Urbana-Champaign.

Mostly the work of scholars from Central Europe and the Black Sea region, this massive volume focuses on the relationship between historical research and memory, in particular the difficulty of certain groups living in the region when confronted with empires and nation-states whose centers may be quite distant from the Black Sea. Attentive readers may thus view the present handbook not merely as a work of reference on history, memory, and movement, but also as a testimony to the historical perspectives developed by a significant number of Central European and
