Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy. Editorial Advisory Board: Andrew Aberdein, Florida Institute of Technology, USA; Jody Azzouni, Tufts University, USA; Otávio Bueno, University of Miami, USA; William Byers, Concordia University, Canada; Carlo Cellucci, Sapienza University of Rome, Italy; Chandler Davis, University of Toronto, Canada; 1926-2022 Paul Ernest, University of Exeter, UK; Michele Friend, George Washington University, USA; Reuben Hersh, University of New Mexico, USA; 1927-2020 Kyeong Hwa Lee, Seoul National University, South Korea; Yuri Manin, Max Planck Institute for Mathematics, Germany; 1937-2023 Athanase Papadopoulos, University of Strasbourg, France; Ulf Persson, Chalmers University of Technology, Sweden; John Stillwell, University of San Francisco, USA; David Tall, University of Warwick, UK; 1941-2024 This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersh, and Yuri Manin. Barry Mazur, Gerhard Gade, University Professor, Harvard University. This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate. John Stillwell, Emeritus Professor of Mathematics, University of San Francisco. Recipient of the 2005

Chauvenet Prize Dedicating a volume to the memory of three mathematicians Chandler Davis Reuben Hersh and Yuri Manin who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes Etudes Scientifiques

Québec Studies in the Philosophy of Science Mathieu Marion, Robert S. Cohen, 2012-12-06 By North American standards philosophy is not new in Quebec the first mention of philosophy lectures given by a Jesuit in the College de Quebec founded 1635 dates from 1665 and the oldest logic manuscript dates from 1679 In English speaking universities such as McGill founded 1829 philosophy began to be taught later during the second half of the 19th century The major influence on English speaking philosophers was at least initially that of Scottish Empiricism On the other hand the strong influence of the Catholic Church on French Canadian society meant that the staff of the faculties of the French speaking universities consisted until recently almost entirely of Thomist philosophers There was accordingly little or no work in modern Formal Logic and Philosophy of Science and precious few contacts between the philosophical communities In the late forties Hugues Leblanc was a young student wanting to learn Formal Logic He could not find anyone in Quebec to teach him and he went to study at Harvard University under the supervision of W V Quine His best friend Maurice L Abbe had left a year earlier for Princeton to study with Alonzo Church After receiving his Ph D from Harvard in 1948 Leblanc started his professional career at Bryn Mawr College where he stayed until 1967 He then went to Temple University where he taught until his retirement in 1992 serving as Chair of the Department of Philosophy from 1973 until 1979

Imacoqwa's Arrow Jadran Mimica, 2025-05-30 A pathbreaking study of Yagwoia cosmological concepts In *Imacoqwa's Arrow* Jadran Mimica draws on decades of field research to bring us a rich ethnographic account of myth and meaning in the lifeworlds of the Yagwoia of Papua New Guinea He focuses especially on the relations of the sun and the moon in Yagwoia understandings of the universe and their own place within it This is classic terrain in Melanesian ethnography but Mimica does much more than add to the archive of anthropological accounts of the significance of the sun and the moon for peoples of this part of the world With extraordinary rigor and reflexivity he grounds his understanding of Yagwoia concepts in psychoanalytic and phenomenological methods that afford a radically new and revealing translation of these seminal themes in Melanesian mythology and its poetics This is a major contribution to the hermeneutics of ethnographic translation and theorization

Gravitation Charles W.

Misner, Kip S. Thorne, John Archibald Wheeler, 2017-10-03 First published in 1973 *Gravitation* is a landmark graduate level textbook that presents Einstein's general theory of relativity and offers a rigorous full year course on the physics of gravitation. The book also offers a unique alternating two track pathway through the subject. Material focusing on basic physical ideas is designated as Track 1 and formulates an appropriate one semester graduate level course. The remaining Track 2 material provides a wealth of advanced topics instructors can draw on for a two semester course with Track 1 sections serving as prerequisites. This must have reference for students and scholars of relativity includes a new preface by David Kaiser reflecting on the history of the book's publication and reception and a new introduction by Charles Misner and Kip Thorne discussing exciting developments in the field since the book's original publication. The book teaches students to Grasp the laws of physics in flat and curved spacetime. Predict orders of magnitude. Calculate using the principal tools of modern geometry. Understand Einstein's geometric framework for physics. Explore applications including neutron stars Schwarzschild and Kerr black holes gravitational collapse gravitational waves cosmology and so much more.

The A to Z of Logic Harry J. Gensler, 2010-02-12

The *A to Z of Logic* introduces the central concepts of the field in a series of brief non technical cross referenced dictionary entries. The 352 alphabetically arranged entries give a clear basic introduction to a very broad range of logical topics. Entries can be found on deductive systems such as propositional logic modal logic deontic logic temporal logic set theory many valued logic mereology and paraconsistent logic. Similarly there are entries on topics relating to those previously mentioned such as negation conditionals truth tables and proofs. Historical periods and figures are also covered including ancient logic medieval logic Buddhist logic Aristotle Ockham Boole Frege Russell Godel and Quine. There are even entries relating logic to other areas and topics like biology computers ethics gender God psychology metaphysics abstract entities algorithms the ad hominem fallacy inductive logic informal logic the liar paradox metalogic philosophy of logic and software for learning logic. In addition to the dictionary there is a substantial chronology listing the main events in the history of logic an introduction that sketches the central ideas of logic and how it has evolved into what it is today and an extensive bibliography of related readings. This book is not only useful for specialists but also understandable to students and other beginners in the field.
