fundamental theory and practice for system diagnosis and prognosis      Nuclear Reactor Safety F Farmer, 2012-12-02

Nuclear Reactor Safety aims to put the nuclear hazard in perspective by providing an objective overall technical review of the field. It focuses on reactor accidents and their consequences. The technical arguments will be concerned broadly with reactor accident conditions and will deal with both the arrangements necessary to prevent any dangerous diversion from normal operation and to ameliorate the consequences if such a diversion should occur. The book is organized into three parts. Part I describes the nature of fission products and the hazards to man and his environment resulting from the uncontrolled release of fission products in accident conditions. Part II discusses a quantitative approach to reactor safety assessment and the quantification of vessel integrity. Part III deals with the basic principles of analysis and assessment of reactor safety and then considers the specific safety problems of thermal and fast reactors in detail. This book is intended for two types of readers. First are technicians: those engaged in nuclear engineering, designers, constructors and operators of nuclear stations as well as those who would make a career in nuclear safety. Second are those not necessarily scientists who are tasked with making decisions in the field of energy use and allocation or are concerned with environmental matters.      **Human - Computer Systems Interaction: Backgrounds and Applications 2** Zdzisław S. Hippe, Juliusz L. Kulikowski, Teresa Mroczek, 2011-11-23

The main contemporary human system interaction (HSI) problems consist in design and/or improvement of the tools for effective exchange of information between individual humans or human groups and technical systems created for humans aiding in reaching their vital goals. This book is a second issue in a series devoted to the novel HSI results and contributions reached for the last years by many research groups in European and extra-European countries. The preliminary, usually shortened versions of the chapters were presented as conference papers at the 3rd International Conference on HSI held in Rzeszów, Poland, in 2010. A large number of valuable papers selected for publication caused a necessity to publish the book in two volumes. The given 1st Volume consists of sections devoted to I Decision Supporting Systems, II Distributed Knowledge Bases and WEB Systems, and III Impaired Persons Aiding Systems. The decision supporting systems concern various application areas like enterprises management, healthcare, agricultural products storage, visual design, planning of sport trainings, etc. Other papers in this area are devoted to general decision supporting methods and tools. In the group of papers concerning knowledge bases and WEB-based systems, some are focused on new computer networks technologies, models of malicious network traffic, and selected problems of distributed networks resources organization and tagging. The concepts of a distributed virtual museum and of managing the process of intellectual capital creation in this part of the book are also presented. The last part of this volume contains a dozen of papers concerning various concepts and realizations of disabled persons aiding systems. Among them, the systems aimed at aiding visual or motion disability affected persons can be mentioned. The problems of residential infrastructure for ubiquitous health supervision and graphics and gesture-based interactive children therapy supporting systems design in this volume are also presented.      **Naval Research Logistics**
