Frontiers in Experimental Fluid Mechanics

Mohamed Gad-el-Hak,2013-03-08 Dynamical systems theory and flow control are two research areas of great current interest These and other special situations are among the topics covered in this volume Each article emphasizes the use of experiments to achieve better physical understanding of a particular class of flow problems The topics covered were chosen because of their importance to the field recent appeal and potential for future development The articles are comprehensive and coverage is pedagogical with a bias towards recent developments

Bifurcations in Flow Patterns

P.G. Bakker,2012-12-06 The main idea of the present study is to demonstrate that the qualitative theory of differential equations when applied to problems in fluid and gasdynamics will contribute to the understanding of qualitative aspects of fluid flows in particular those concerned with geometrical properties of flow fields such as shape and stability of its streamline patterns It is obvious that insight into the qualitative structure of flow fields is of great importance and appears as an ultimate aim of flow research Qualitative insight fashions our knowledge and serves as a good guide for further quantitative investigations Moreover qualitative information can become very useful especially when it is applied in close correspondence with numerical methods in order to interpret and value numerical results A qualitative analysis may be crucial for the investigation of the flow in the neighbourhood of singularities where a numerical method is not reliable anymore due to discretisation errors being unacceptable Up till now familiar research methods frequently based on rigorous analyses careful numerical procedures and sophisticated experimental techniques have increased considerably our qualitative knowledge of flows albeit that the information is often obtained indirectly by a process of a careful but cumbersome examination of quantitative data In the past decade new methods are under development that yield the qualitative information more directly These methods make use of the knowledge available in the qualitative theory of differential equations and in the theory of bifurcations

Chaos and Statistical Methods Y. Kuramoto,2012-12-06

The 6th Kyoto Summer Institute devoted to Chaos and Statistical Mechanics was held from September 12 to 15 1983 at the Research Institute for Mathematical Sciences Kyoto University and at Hotel Kuniso The meeting was aimed at clarifying various aspects of chaotic systems appearing in different scientific disciplines critically examining related mathematical methods developed so far thus preparing for possible breakthroughs among others for the opening of a new period of statistical mechanics of deterministic systems The number of participants was 135 of which 24 were from abroad We believe

that the well prepared lecture of each speaker and lively discussions among many participants from various research fields led the meeting to a successful conclusion The 6th KSI was organized by the Research Institute for Fundamental Physics A number of young chaos researchers in Japan also participated actively in the organization We were also in close contact with the organizer of the IUTAM Symposium on Turbulence and Chaotic Phenomena in Fluids Kyoto Kaikan Conference Hall Kyoto September 5 10 1983 This volume contains most of the lectures presented at the 6th KSI We are very grateful to all the authors for their efforts in preparing such excellent manuscripts The 6th KSI was supported by the Ministry of Education Science and Culture and the Yamada Science Foundation The organizing committee acknowledges gratefully their generous financial support Finally thanks are due to Dr M Toya and Miss T Sumide for their invaluable assistance
